Introduction	xxiii

1. Remote Sensing for Disaster Response: A Rapid, Image-Based Perspective

Charles Huyck, Enrica Verrucci and John Bevington

1.1 Introduction	1
1.2 Remote Sensing and Disaster Response	2
1.3 Limitations, Uncertainties, and Best Practice	17
1.4 Conclusions	23
References	23

2. The Capabilities of Earth Observation to Contribute along the Risk Cycle

H. Taubenböck, C. Geiß, M. Wieland, M. Pittore, K. Saito, E. So and M. Eineder

2.1 Introduction	25
2.2 Capabilities of Remote Sensing for Assessing and Mapping Earthquake Risk and Damage	27
2.3 Conclusion and Inferring Suggestions for EO on Earthquake Analysis	45
Acknowledgments	47
References	47

3. Disaster-Risk Reduction through the Training of Masons and Public Information Campaigns: Experience of SDC's "Competence Centre for Reconstruction" in Haiti

Tom Schacher

3.1 Introduction	55
3.2 Context	57

3.3	Identification of the Most Appropriate Construction Technique	57
3.4	Identification of Partners for the Training of Masons	59
3.5	Development of Training Content and Training Setup	60
3.6	Adaptation of the Training to Varying Situations	62
3.7	A Public Information Campaign to Accompany the Training	63
3.8	Conclusion and Lessons to be Learned	66
	References	68
4.	The Most Useful Countermeasure Against Giant Earthquakes and Tsunamis—What We Learned From Interviews of 164 Tsunami Survivors	
	<i>Mizuho Ishida and Masataka Ando</i>	
4.1	Introduction	72
4.2	Locations of the Interview Cities and Characteristics of the Interviewees	74
4.3	Evacuation Behaviors	76
4.4	The Effect of the Current Technology for Disaster Prevention	78
4.5	Construction of Sea Embankments or Breakwaters in the Bay	85
4.6	Discussions on the Effect of the Breakwaters	86
4.7	Role of Elementary Schools in Disaster Prevention	97
4.8	Conclusion	98
	Acknowledgments	99
	References	99
5.	Aggravated Earthquake Risk in South Asia: Engineering versus Human Nature	
	<i>Roger Bilham</i>	
5.1	Introduction: Hazard, Risk, and Aggravated Risk	104
5.2	Statistics of Earthquake Fatalities	106
5.3	Problems Associated with Assessments of Seismic Hazards	109
5.4	A Summary of Earthquake Hazards in and Surrounding the Indian Plate	113
5.5	Conservatism and Denial as Aggravated Risk	120
5.6	Earthquake Knowledge and Its Application	128
5.7	Discussion—Who Gains, Who Loses	133
5.8	Conclusions	135
	References	136
6.	Ten Years of Real-time Earthquake Loss Alerts	
	<i>Max Wyss</i>	
6.1	Introduction	143
6.2	Brief Review of the Methods	144

6.3	Brief Review of the Data Sets	147
6.4	Brief Review of the Services Provided	150
6.5	Error Sources	153
6.6	City Models	156
6.7	Basic Concepts	158
6.8	The Future of Real-time Estimates of Losses Due to Earthquakes	160
6.9	Discussion and Conclusions	163
	Acknowledgments	164
	References	164

7. Forecasting Seismic Risk as an Earthquake Sequence Happens

J. Douglas Zechar, Marcus Herrmann, Thomas van Stiphout and Stefan Wiemer

7.1	Introduction	167
7.2	Seismic Risk	168
7.3	Forecasting Seismic Risk during the L'Aquila Sequence	170
7.4	Forecasting Seismic Risk for the SEISMO-12 Scenario Sequence	174
7.5	Discussion	179
	Acknowledgments	181
	References	181

8. How to Render Schools Safe in Developing Countries?

Amod M. Dixit, Surya P. Acharya, Surya N. Shrestha and Ranjan Dhungel

8.1	Introduction	184
8.2	Earthquake Risk of Nepal	185
8.3	Seismic Vulnerability of Schools in Nepal	186
8.4	Reasons for High Seismic Vulnerability of Schools	187
8.5	Making Schools Safe Against Earthquakes	190
8.6	Implementation of an SESP	192
8.7	Lessons Learned	197
8.8	Conclusion	201
	References	201

9. The Socioeconomic Impact of Earthquake Disasters

James E. Daniell

9.1	Introduction	203
9.2	Development of a Database to Assess Socioeconomic Impacts of Earthquakes	204

9.3	Social Losses from Earthquakes from 1900 to 2012	209
9.4	Economic Losses from Earthquakes from 1900 to 2012	221
9.5	Conclusion	232
	References	233
10.	The Contribution of Paleoseismology to Earthquake Hazard Evaluations	
	<i>Mustapha Meghraoui and Kuvvet Atakan</i>	
10.1	Introduction	237
10.2	Modern Techniques for Paleoearthquake Studies	239
10.3	Paleoseismology and Seismic Source Characterization	247
10.4	Case Studies with Longest Earthquake Records	249
10.5	Paleoearthquake Studies and Their Integration in SHA	258
10.6	Discussion—Conclusion	264
	References	265
11.	The Role of Microzonation in Estimating Earthquake Risk	
	<i>Imtiyaz A. Parvez and Philippe Rosset</i>	
11.1	Introduction	273
11.2	Ground Motion Estimate at the Regional Scale	274
11.3	Local Site Response and Microzonation	281
11.4	Liquefaction	291
11.5	Case Histories of Some Indian Megacities	293
11.6	Influence of Microzonation Data on Risk Assessment	297
11.7	Conclusions	303
	References	304
12.	Why are the Standard Probabilistic Methods of Estimating Seismic Hazard and Risks Too Often Wrong	
	<i>Giuliano Panza, Vladimir G. Kossobokov, Antonella Peresan and Anastasia Nekrasova</i>	
12.1	Introduction	310
12.2	Theoretical Limits of PSHA	313
12.3	Practical Limits of PSHA	319
12.4	Possible Alternatives to PSHA: The Neo-deterministic Approach (NDSHA)	321
12.5	Performances of PSHA: The Validation Problem	327
12.6	Performance of NDSHA	336
12.7	Estimates of Seismic Risks	346
12.8	Summary and Conclusions	348
	References	350

13. The Continued Utility of Probabilistic Seismic-Hazard Assessment

Mark W. Stirling

13.1	Introduction	359
13.2	The Logic of PSHA	360
13.3	Nature of Recent Criticisms of PSHA	364
13.4	Advances in PSH Inputs	368
13.5	Future Needs	371
13.6	Conclusions	374
	Acknowledgments	375
	References	375

14. Precarious Rocks: Providing Upper Limits on Past Ground Shaking from Earthquakes

John G. Anderson, Glenn P. Biasi and James N. Brune

14.1	Introduction	377
14.2	PBRs are Physical Objects that Put Long-Term Bounds on Past Ground Motions	378
14.3	Distribution of PBRs	390
14.4	Applications	393
14.5	Summary	400
	Acknowledgments	400
	References	400

15. Quantifying Improvements in Earthquake-Rupture Forecasts through Testable Models

Danijel Schorlemmer and Matthew C. Gerstenberger

15.1	Introduction	405
15.2	Some Remarks about Earthquake Prediction	407
15.3	Forecast Models	408
15.4	Gridded Rate-Based Forecasts	409
15.5	Alarm-Based and Regional Forecasts	409
15.6	Probabilistic Seismic Hazard Analysis and Hybrid Models	409
15.7	Some Common Assumptions and Questions Posed by Earthquake Forecast Models	411
15.8	The Role of Testing Earthquake Occurrence Models	413
15.9	Developing Tests of Earthquake Forecast Models	414
15.10	Testing Methods	416
15.11	Gridded Rate-Based Testing	417
15.12	Alarm-Based Testing	418
15.13	Fault-Based Testing	418
15.14	Structured Testing	419
15.15	Testing Centers: Collaboratory for the Study of Earthquake Predictability	420
