Foreword xi
Preface xiii
Acknowledgments xv
Introduction xvii

CHAPTER 1 Introduction 1
1.1 Some Basic Knowledge Related to Submarine Optical Cable Communication 2
1.1.1 Optical Fiber Structure and Optical Transmission Characteristics 2
1.1.2 Structures and Types of Submarine Optical Cable 5
1.1.3 Submarine Cable Communication Technology Features 8
1.2 Submarine Optical Cable System Composition and Networking Mode 9
1.2.1 Submarine Cable System Composition 9
1.2.2 Submarine Cable System Networking Mode 15
1.3 Development History of Submarine Communication Engineering 17
1.3.1 Invention and Development of the Submarine Telegraph Cable 17
1.3.2 Invention and Development of the Submarine Coaxial Communication Cable 20
1.3.3 Invention and Development of Submarine Optical Cable Communication 24

CHAPTER 2 Marine Natural Geography and Sea Boundary Division 29
2.1 Sea and Land Distribution on the Earth's Surface 30
2.2 Natural Geography of China Offshore 32
2.2.1 China's Offshore Geographical Location 32
2.2.2 Seabed Topography and Landforms 33
2.2.3 Seabed Sediments 37
2.2.4 Climatic Factors and the Hydrological Environment 40
2.2.5 Marine Disasters 46
2.3 Law of the Sea and Sea Boundary Division 50
2.3.1 International Convention on the Law of the Sea 50
2.3.2 China's Territorial Sea System 55

CHAPTER 3 General Layout and Characteristics of the Submarine Optical Cable System in China 59
3.1 International Submarine Optical Cable System 60
3.1.1 Construction of the International Submarine Optical Cable System in China 60
3.1.2 Layout and Characteristics of the International Submarine Optical Cable System in China 71

3.2 China's Domestic Submarine Optical Cable System 76
3.2.1 Building Progress 76
3.2.2 Distribution Characteristics 81
3.3 Disposal Reasons and Abandoned Programs of Submarine Optical Cable 82
3.3.1 Disposal Reasons 82
3.3.2 Abandoned Programs 83
3.3.3 Analysis of Abandoned Submarine Optical Cables in China 85

CHAPTER 4 Desktop Study of Site Selection for Submarine Optical Cable Engineering 87
4.1 Site Selection Principles and Working Procedures of the Submarine Optical Cable Project 88
4.1.1 Project Site Selection Principles 88
4.1.2 Project Site Selection Procedures 89
4.1.3 Desktop Study Report 92
4.2 Examples of Site Selection for the Submarine Optical Cable Project 94
4.2.1 China–Japan Submarine Fiber Optic Cable System 94
4.2.2 China–US Cable Network 95
4.2.3 Asia Pacific Cable Network 2 100
4.2.4 City-to-City Cable System 103
4.2.5 Trans-Pacific Express 105
4.2.6 Intra-Asia Cable System 108
4.2.7 Taiwan Strait Express-1 109
4.2.8 Asia Pacific Gateway 112

CHAPTER 5 Engineering Site Survey for Submarine Optical Cable 117
5.1 The Purpose and Contents of Survey 118
5.1.1 The Purpose of Survey 118
5.1.2 The Contents of Survey 118
5.2 Survey Procedures and Technical Methods 132
5.2.1 Survey Procedures 132
5.2.2 Survey Technique and Methods 133
5.3 Cable Routing Condition Evaluation and Route Survey Report Compilation 156
5.3.1 Routing Condition Evaluation 156
5.3.2 Route Survey Report and Map Compilation 160

CHAPTER 6 Installation of the Submarine Optical Cable 161
6.1 Installation Equipment for Submarine Optical Cable 161
6.1.1 Submarine Cable Ship 162
6.1.2 Burial Equipment 171
6.2 Installation Technique for Submarine Optical Cable 180

6.2.1 Submarine Cable Loading 180
6.2.2 Submarine Cable Installation 182

CHAPTER 7 Maintenance of Submarine Optical Cable 195
7.1 International Organizations for the Protection of Submarine Cable and Related Laws 196
7.1.1 International Cable Protection Committee 196
7.1.2 Relevant Laws for the Protection of International Submarine Cable 200
7.1.3 Operation Mode of International Submarine Cable Maintenance 205
7.2 Fault Diagnosis and Testing for Submarine Optical Cable 206
7.2.1 Submarine Optical Cable Fault Types 206
7.2.2 Methods for Determining Fault Locations of the Submarine Optical Cable 207
7.3 Fault Repair for Submarine Optical Cable 212
7.3.1 Fault Repair Procedures for Submarine Optical Cable 212
7.3.2 Recovery Technique for Submarine Optical Cable 215
7.3.3 Testing Technique of Fault Repair for the Submarine Optical Cable 226
7.3.4 Jointing Technique for the Submarine Optical Cable 229

CHAPTER 8 Safety of Submarine Optical Cable 235
8.1 Factors Affecting the Safety of Submarine Optical Cable 236
8.1.1 Human Factors Related to Marine Development Activity 236
8.1.2 Natural Factors 246
8.1.3 Other Factors 250
8.2 Countermeasures to Ensure Safety of the Submarine Optical Cable 253
8.2.1 Develop Complete Laws and Regulations for the Protection of Submarine Cable 253
8.2.2 Optimization of Engineering Site Selection 253
8.2.3 Perfecting Engineering Design 254
8.2.4 Standardized Installation Procedures 255
8.2.5 Strengthening Project Management and Safety Emergency Measures 256

CHAPTER 9 Submarine Cable Project Management and Maintenance Monitoring Information System 259
9.1 Types and Composition of the Geographic Information System 260
9.1.1 Types of Geographic Information System 260
9.1.2 Composition of the Geographic Information System 262
9.2 Submarine Optical Cable Project Management Information System 264
9.2.1 Construction Goal 264
9.2.2 Spatial Reference System and Map Projection 265

9.2.3 Technical Route of the System Construction 268
9.2.4 Geospatial Data 269
9.2.5 Main Functions 270
9.2.6 Typical Case Analysis 274
9.3 Submarine Optical Cable Maintenance and Monitoring Information System 276
9.3.1 Construction Goal 276
9.3.2 Ship Dynamic Monitoring Mode 280
9.3.3 Integration Technique of the Submarine Cable Maintenance and Monitoring System 281
9.3.4 Principles and Composition of the Submarine Cable Maintenance and Monitoring System 284
9.3.5 Main Functions of the Submarine Cable Maintenance and Monitoring System 289

CHAPTER 10 Technique Developments and Market Prospects of Submarine Optical Cable Engineering 291
10.1 Development Trend of Submarine Optical Cable Communication Technology 291
10.1.1 Modulation-Demodulation Technique and Its Development Trends 292
10.1.2 Development Trends of the Forward Error Correction Technique 293
10.1.3 Development Trends of the Optical Fiber Technique 294
10.2 Development Trends of Marine Route Survey, Installation and Maintenance Technique for Submarine Optical Cable 295
10.2.1 Development Trends of Marine Route Survey Technology of Submarine Optical Cable 295
10.2.2 Development Trends of Installation and Maintenance Technique of Submarine Optical Cable 297
10.3 Market Outlook for Submarine Optical Cable Communication 300
10.3.1 Submarine Communication Development Closely Related to Economic Prosperity 300
10.3.2 Global Economic Integration Opening up Broad Prospects for Submarine Optical Cable Development 301
10.3.3 Emergence of Communications and New Information Media to Add a Strong Force for Submarine Optical Cable Development 302

Appendix 1: Brief Introduction of Submarine Cable Ships 307
Appendix 2: Maps 341
