	Introduction	xvii
Part I	Understanding and managing corrosion processes	1
1	Understanding corrosion in underground pipelines: basic principles	3
	R. Norsworthy, Polyguard Products Inc., USA	3
1.1	Introduction	3
1.2	Electrochemical corrosion: conventional current theory	6
1.3	Electrochemical corrosion: advanced theories	8
1.4	Other factors in corrosion	13
1.5	Reference cells	
1.6	Corrosion processes affecting pipelines	15
1.7	Environmental cracking	17
1.8	Microbiologically influenced corrosion	24
1.9	Corrosion protection methods: coatings	26
1.10	Corrosion protection methods: cathodic protection (CP)	27
1.11	Conclusion (Cr)	30
1.12	Sources of further information and advice	32
1.13	References	32 33
2	AC induced	55
-	AC-induced corrosion of underground pipelines	35
	B. TRIBOLLET, LISE/CNRS, France and M. MEYER, GDF-Suez, France	
2.1	Introduction	35
2	The origin of alternating voltage induced in pipelines	39

vi	Contents	
2.3	Electrical parameters affecting the AC-corrosion process	43
2.4	Harmonic analysis of AC corrosion	46
2.5	Cathodic protection of pipelines	51
2.6	Analysis of AC-corrosion products	55
2.7	Testing AC-corrosion processes	56
2.8	Conclusion	58
2.9	References	59
3	Assessing the significance of corrosion in onshore oil	
	and gas pipelines	62
	P. HOPKINS, Penspen Limited, UK	
2.1	Introduction	62
3.1	Corrosion in onshore pipelines	64
3.2	Detecting corrosion	66
3.3	Preventing corrosion	67
3.4	Assessment of corrosion	69
3.5	Particular corrosion assessment methods	73
3.6	Particular issues in corrosion assessment	76
3.7	Conclusion	81
