Acknowledgments XIX

Volume 1

Road

Fundamental study on ideal longitudinal control for improved dynamical handling characteristics
M. Yamakado, M. Abe & Y. Kano 3

Component based modeling and validation of a steering system for a commercial vehicle
J. Leof, J. Besselink & H. Nijmeijer 15

Robust design of road vehicle suspensions using fuzzy methods
W. Schiehlen, M. Hanus & I. Iroz 25

Evaluation of chassis control algorithms using controllability region analysis
S. Horiuchi 35

Influence of body stiffness on vehicle dynamics characteristics
O. Danielsson, A. González Cocaña, K. Ekström, M. Bayani Khaknejad, M. Kloppe & R. Dekker 45

Development of a novel model of driver-vehicle steering control incorporating sensory dynamics
C.J. Nash & D.J. Cole 57

A speed control race driver model with on-line driving trajectory planning
Y. Koh, K. Yi, H. Heo & K. Kim 67

Optimization of driver and chassis of FWD racing car for faster cornering
M. Maniovski 77

Coordinated braking control for In-Wheel-Motor-Driven Electric Vehicles with regenerative and antilock braking system based on control allocation
X. Jia & G. Yin 87

The effect on power consumption & handling of efficiency-driven active torque distribution in a four wheeled vehicle
G. Parker, J. Griffin & A. Popov 97

Optimal yaw-rate target for electric vehicle torque vectoring system
E.N. Smith, D. Tavernini, C. Claret, E. Velenis & D. Cao 107

Effects of different excitation spectra on virtual suspension damper design
F. Klinger, J. Edelmann, M. Plöchl & S. Jeindl 115

Farm tractor ride comfort assessment
M. Gobbi, G. Mastroi, M. Pernati & G. Previati 125
Body attitude state estimation using wheel rolling speed variations and application in driving torque control
Y. Liu, J. Hoximi, M. Morita & A. Higuchi
461
Active brake force distribution for pitch angle minimisation
D. Tavernini, E. Velenis & F. Assadian
473
Vehicle stability self-tuning control strategy based on joint criterion
Z. Yu, B. Leng, L. Xiong & Y. Feng
481
Development of a road surface friction estimation for actual road
Y. Shiozawa, P. Raklinauerovensk & H. Mouri
491
Identification of tyre characteristics using active force excitation
A. Alblass, F. Brizelius, B. Jacobson, T. Gustafsson & M. Jonasson
501
Friction estimation at tyre-ground contact based on the Gough-plot for safe autonomous vehicles
G. Prevati, M. Gobbi, G. Mastinu, S. Dell’Agostino, J. Edelmann & M. Ploch
511
Virtual brake software release
S. Angelis, A. Johnsson, M. Klomp, R. Hansson & D. Katsounakis
521
Model-based traction control with friction adaption for preventing drive-train vibration during the power-boost acceleration process of front-wheel drive vehicles
D. Kilian, J.M. Georg, S. Poltersdorf & M. Lienkamp
533
Upright mounted pushrod: the effects on racecar handling dynamics
F.P. Marchesin, R.S. Barbosa, M.A.L. Alves, M. Gadola, D. Chiumam & C. Benini
543
The significance of high-order dynamics in lap time simulations
R. Lot & N. Dal Bianco
553
The unification of acceleration envelope and driveability concepts
I.G. Salisbury, D.JN. Limebeer, A. Tremlett & M. Massaro
563
Optimized roll behavior and ride comfort based on central roll torque distribution on electromechanical anti-roll bars and semiactive dampers and approaches on subjective-objective correlation
A.M. Wenzelis, M. Lienkamp & R. Schwarz
573
Damping control to enhance transient cornering feeling using Kalman filter
H. Sakai
585
Design and validation of the second generation of the ROboMObiI’s Vehicle Dynamics Controller
R. de Castro, T. Buente & J. Brembeck
595
Wheel motion control using a hybrid actuator system
M. Ringdorfer & M. Horn
607
Optimal control and construction design of variable-geometry suspension systems
B. Nemeth & P. Gaspard
617
An integrated control of front/rear traction distribution and differential braking for limit handling
E. Joa, K. Yi & K. Kim
623
Robust handling performance against weight variation focused on transient region
T. Hosono, K. Takekoshi & T. Shiiba
633
Stability analysis
S. Beregi, D. Takahashi
Passive suspension for heavy vehicles
J.Z. Jiang, X. Liu
Driving condition of heavy duty vehicle
T. Zhu, A. Khajepour
MPC-based frame
S. Arrigoni & F.
Integrated designs
L. Pagi, B. Allot
Comparative evaluation of vehicle configurations
J. Tobolár, R. de Castro
Estimation of vehicle wheel force
Y. Wang & H. Wu
Identification of the controller synthesis
M. Fleps-Dezassara
Model-based integration
H. Lu, Y. Shi, F. Wei
On-board determination of standard-application
C. Lex, A. Eichberger
Analysis of the effects of... K. Hoppling, K. Anderl
Physical tire models
P. Sarkisov, G. Pachkov, G.L. Gil Gómez, D. Bickel
Analysing vehicle dynamics
A. Kasachov, F. Brueckl, X. Guan, C. Duan
The importance of system detection
H. Sakai
Visualization of driving
M. Hada, T. Yamaguchi
Stability analysis of the car-trailer system with a time-delayed tyre model
S. Beregi, D. Takács, G. Stépán & D.A.W. Barton

Passive suspension incorporating inerter for reduction in road damage caused by heavy vehicles
J.Z. Jiang, X. Liu, A.J. Harrison & X. Na

Driving condition identification based on HHMM model – Application to the simulation of heavy duty vehicle
T. Zhu, A. Khatipour, C. Zong, L. Mai & H. Deng

MPC-based framework for autonomous ground vehicles in a complex environment
S. Arrigoni & F. Cheli

Integrated design and simulation of a direct drive, electric shuttle vehicle
L. Pugi, B. Aliotta, M. Cipriani, M. Pratesi, A. Bariolomei & F. Grasso

Comparative evaluation of energy efficiency of electrical vehicle powertrain configurations

Estimation of vehicle yaw moment of inertia in dynamic road test using Wheel Force Sensor
Y. Wang & H. Wiemer

Identification of a nonlinear full-vehicle model for semi-active damper controller synthesis
M. Fleps-Dezasse & J. Tobolár

Model-based integrated control with vehicle states and parameters estimation
H. Lu, Y. Shi, F. Yu & D. He

On-board determination of the friction coefficient between tire and road using standard-application vehicle dynamics sensors
C. Lex, A. Eichberger & W. Hirschberg

Analysis of the effect of tire inflation pressure on tire road interaction during braking
K. Höpping, K. Augsburg, K. Hutengs, G. Dherbomez, B. Wang, A. Victorino & A. Charara

Physical tire model based on understanding of separate components of tire deformation
P. Sarkissian, G. Prokop, G. Gladow & S. Popov

Analysing vehicle dynamics objective and subjective testing in winter conditions
G.L. Gil Gómez, E. Bakker, M. Nybacka & L. Drugge

The importance of yaw motion feedback in driving simulators
A. Kaschon, F. Bracelius & X. Xie

A high fidelity driving feeling real-time dynamic steering system model
X. Guan, C. Duam, L. Zheng, J. Zhao, L. Tian & H. Bao

System to detect decrease in driver’s lane-keeping ability within several seconds by inverse driver model
H. Sakai

Visualization of driver’s body motion by instantaneous screw axis and line of action
M. Hada, T. Yamaguchi & Y. Hattori
An intelligent traction control for motorcycles
P. Urda, J.A. Cabrera, J.J. Castillo & A.J. Guerra

Author index

Volume 2

Rail

Dynamic gauging assessment using multi-body simulation – investigation of the effect of the track & the operating conditions
J. Causse, L. Pommier, S. Kraft, F. Dupont & F. Coudert

Pneumatic anti-roll systems for railway secondary suspensions
N. Descoulet & J.-F. Collard

Robust evaluation of rail damage and track forces using representative load collectives
B.A. Pålsson

Assessing the role of longitudinal variability of vertical track stiffness in the long-term deterioration
I. Grossoni, A.R. Andrade & Y. Benez

An efficient condition monitoring strategy for railway vehicle suspension based on recursive least-square algorithm
X.Y. Liu, S. Alfi & S. Bruni

Comparison of wear prediction models for different contact conditions
C. Casamurra, R. Enblom & M. Berg

Scenario based development of a wheel profile using numerical optimization
M. Alh, J. Zernig, H.-P. Kott & W. Wang

Development of self-contained active suspensions for railway vehicles
T.K. Mei, P. Wang, J.Y. Zhang & H. Li

Mechatronic bogie for roller rig tests
J. Kalivoda & P. Bauer

Control development for the scaled experimental railway running gear of DLR
A. Heckmann, C. Schwarz, T. Bünte, A. Keck & J. Brembeck

Research on aerodynamic experiment and dynamic performance of new developed V500 pantograph at 400 km/h or higher

Possible speed increase on soft catenary system with help of auxiliary pantograph
Z.D. Liu, P.A. Jönsson, S. Stichel & A. Ronquist

Loss of stability in a nonsmooth model of dual-point rolling
M. Antali & G. Stehpan

Advances in studying non-linear phenomena in railway transition curve at velocities around the critical one
K. Zboinski & M. Golofit-Stawinska

Operational modal analysis of an overall carbody based on excitation due to electric transformer
H. Li, X. Wang, J.C. Zou, W. Xue & L.M. Zhang
