Contents

Preface		xiv
1	**Human behaviour and safety**	1
	Definition of 'behaviour'	1
	The study of human behaviour	1
	Cognitive psychology	2
	Complexity of human behaviour	3
	Factors affecting human behaviour	3
	Elements and functions of human behaviour	3
	Attitude	3
	Motivation	7
	Perception	14
	Memory	15
	Personality	17
	Ancestry and social background	22
	Experience, intelligence, education and training	23
	Attitudes and behaviour	24
	Approaches to change	25
	The human factors issues	26
	Perception of risk	27
	Behavioural safety – what does it mean?	28
	Perception of risk and its influence on risk-taking behaviour	29
	Accident causation	33
	Principal behavioural causes of accidents	38
	Fault tree analysis	38
	Pre-accident and post-accident strategies	42
	Accident proneness	46
	Unsafe behaviour	46
	Conclusions	47
	Key points	47
2	**Human sensory and perceptual processes**	49
	Human sensory receptors	49
	Sensory perception and messages	50
	Perceptual processes	57
	The process of perception of danger	57
	Information processing	58
	Sensory defects	59
	Basic screening techniques	59
	Perception and the limitations of human performance	59
	Conclusions	61
	Key points	61

3	**Organizations and groups**	62
	Organization theory	62
	Features of organizations	62
	The survival of the organization	64
	Basic organizational structures	65
	Formal and informal groups within an organization	66
	Work groups	67
	Group dynamics	69
	Group behaviour	69
	Vulnerable groups	70
	Leadership as a feature of organizations	72
	Classical organization theory	75
	Management style	76
	The autocrat and the democrat	77
	Peer group pressures and norms	78
	Types of organizational communication	79
	Attitudes to safety and risk management	79
	Criteria for risk acceptability (tolerability)	80
	Organizational safety culture	84
	Health and safety organization	84
	Performance monitoring	85
	Corporate responsibility for safety	87
	The role of the supervisor	88
	Conclusions	89
	Key points	89
4	**People factors**	90
	What are human factors?	90
	The appropriate safety climate	92
	The individual differences in people	95
	Psychological, sociological and anthropological factors leading to individual differences	96
	Human limitations	97
	Degradation of human performance	99
	The relevance of human factors within the sociotechnical system	100
	Individual decision-making processes	101
	Individual change	102
	Human reliability and human reliability assessment	102
	The human causes of accidents	104
	The cause–accident–result sequence	105
	Human capability and safety – The legal situation	105
	Human capability and risk assessment	107
	Conclusions	108
	Key points	108
5	**Perception of risk and human error**	110
	Perception of risk	110
	Perceptual set	110

Perceptual sensitization and defence 111
Perception and sensory inputs 111
Filtering and selectivity of perception 113
Optimum bias 114
Risk compensation (homeostasis) 114
Cultural aspects of risk 115
Social amplification of risk 115
Communication of risk 116
Risk perception and communication (HSE) 116
Perceptual expectancy and stereotyping 119
Information processing 120
Skill-, rule- and knowledge-based behaviour 122
Individual behaviour in the face of danger 124
Human error 125
Classification of human error 128
Employee selection processes 131
Use of system responses to help prevent human error 132
A more simplistic approach to human error 133
Contribution of human error to major catastrophes 134
Conclusions 135
Key points 135

6 **Organizational control and human reliability** 137
The organizational environment 137
Organizational factors 141
Safety organization 141
Organizational and individual goals 143
Integration of organizational goals with those of the individual 143
Systems organization and reliability 144
Types of organization 145
Management systems 146
The reliability of organizational systems 148
Resolving conflict and introducing change 148
Workplace representation 149
Safety Representatives and Safety Committees 150
Health and safety committees 153
Health and Safety (Consultation with Employees) Regulations 1996 157
Employment Rights Act 1996 157
Patterns of employment 158
Home working 162
Conclusions 164
Key points 164

7 **Improving human reliability** 166
The significance of personal factors 166
Human reliability studies 167

Modelling approaches 167
Analytical techniques 168
Technique for human error rate probability (THERP) 170
Scientific management 170
The Hawthorne experiments (Social Man) 172
Stimulus and programmed response 173
Cognitive and learning styles and problem-solving 173
Human reliability modelling 176
Interpersonal relationship studies 176
Motivation and reinforcement – Workplace incentive schemes 177
Reward schemes 177
The decision-making process 178
Decision-making and the operator 180
Benchmarking 181
Benchmarking practice 183
Rules of benchmarking 185
A blame-free culture 185
Personal error reporting 186
System design and organization of work 186
Performance monitoring and auditing 190
Job satisfaction and appraisal schemes 192
Job satisfaction and management style 194
Job satisfaction and self-actualization 197
Job safety standards 197
Job safety analysis 198
The benefits of improving human reliability 202
Conclusion 202
Key points 203

8 **Ergonomic principles** 204
What is ergonomics? 204
The scope of ergonomics 205
Human engineering 205
Areas of ergonomic study 206
The man–machine interface 206
The team approach to ergonomic studies 207
The employee and work 208
Environmental factors 211
Principal areas of ergonomic study 211
Design ergonomics 212
Principles of interface design 214
Interface design audit 216
Task analysis and task design 218
Anthropometry 219
Anthropometric data 219
Anthropometric design factors 220
The legal requirements 222
