CHAPTER 1 ■ Understanding the Road Safety Performance of OECD Countries	1
<hr/>	
KAVI BHALLA and DINESH MOHAN	
1.1 OVERVIEW	2
1.2 ECONOMIC DETERMINISM: ROAD SAFETY PERFORMANCE AS A DEVELOPMENTAL OUTCOME	4
1.3 RISK SUBSTITUTION: CAR OCCUPANTS ARE AT MUCH LOWER RISK THAN PEDESTRIANS	7
1.4 POLITICAL ACTION: THE ROLE OF INSTITUTIONS AND INTERVENTIONS	10
1.5 CONCLUSION: WHAT DOES THIS ALL MEAN FOR DEVELOPING COUNTRIES?	13
CHAPTER 2 ■ Road Traffic Injury as a Public Health Problem	17
<hr/>	
DINESH MOHAN	
2.1 INTRODUCTION	18
2.2 TRANSPORTATION SYSTEMS AND HUMAN ERROR	19
2.3 ROAD TRAFFIC INJURY AS A DISEASE	20
2.3.1 There is no basic difference between traffic injuries and the occurrence of any other disease	20
2.3.2 Road traffic injury can be defined as a disease that results from an acute exposure of the human body to a transfer of energy from the environment around it	20
2.3.3 “Accidents” and injuries are not “Acts of God”	21
2.3.4 Not all injuries can be prevented	21
2.3.5 Injury control measures can be developed systematically	22
2.4 DEVELOPING INJURY CONTROL MEASURES	22
2.4.1 Safe infrastructure and systems	22
2.4.2 The energy control approach and Haddon’s ten strategies	23
2.4.3 Resource allocation analysis, strategy identification, and planning – Haddon’s matrix	24
2.5 SUMMARY	26
CHAPTER 3 ■ Public Health Burden of Road Traffic Injuries	29
<hr/>	

KAVI BHALLA

3.1	HEALTH IMPACTS OF ROAD TRANSPORTATION SYSTEMS	29
3.1.1	Why do countries build roads?	30
3.1.2	How does road transport harm health?	31
3.2	MAGNITUDE OF THE PUBLIC HEALTH BURDEN OF ROAD TRAFFIC	32
3.2.1	About the Global Burden of Disease (GBD) Project	33
3.2.2	Estimates of the Global Burden of Disease	34
3.3	MEASURING THE LOCAL BURDEN OF INJURIES	37
3.3.1	General approach	37
3.3.2	Definitions of key concepts	38
3.3.3	Triangulating from local data sources	39
CHAPTER 4 ■ Land Use-Transportation Planning, Mobility and Safety		45
GEETAM TIWARI		
4.1	INTRODUCTION	46
4.2	ROAD TRAFFIC CRASHES AND LAND USE PLANNING	47
4.2.1	Transportation planning system and safety	48
4.3	CONFLICTS AND TRADE OFFS IN TRANSPORTATION PLANNING	50
4.4	TRANSPORT-LAND USE PATTERNS IN LOW INCOME COUNTRIES	51
4.4.1	Urban planning policies and relocation of poor households	52
4.5	IMPACT OF TRIP LENGTH AND MODE OF TRAVEL ON FATALITY RISK	54
4.6	MOBILITY AND SAFETY CONFLICT	55
CHAPTER 5 ■ Safety Promotion: Education and Legislation		59
DINESH MOHAN		
5.1	INTRODUCTION	60
5.2	INFLUENCE OF SYSTEMS AND THE ENVIRONMENT ON 'HUMAN ERROR'	60
5.3	LIMITATIONS OF ROAD USERS	61
5.3.1	Perception of risk	61
5.3.2	Involvement of the whole population	61
5.3.3	Evidence on limits of education	62
5.3.3.1	Example 1. Promotion of seat belt use	62
5.3.3.2	Example 2. Promotion of helmet use	63
5.3.3.3	Example 3. Children and traffic safety	63
5.3.3.4	Example 4. Driver education	64
5.4	EFFECTIVE COMMUNICATION	65
5.4.1	Effective education programmes	65
5.4.2	Unsuccessful education programmes	66
5.5	CONCLUSIONS	66

CHAPTER 6 ■ Recording of Traffic Crashes	71
<small>GEETAM TIWARI</small>	
6.1 INTRODUCTION	72
6.2 TRAFFIC CRASH DATA	72
6.2.1 Primary level data in India	73
6.2.2 Error analysis of data recording forms	74
6.2.3 Reliability and accuracy of recorded data — case study Bangalore	74
6.2.4 Critical variables for identifying causal factors	76
6.2.5 Use of data in recommending countermeasures	76
6.2.6 Black spot analysis	77
6.2.7 RADMS (Road Accident Data Management System) Tamil Nadu	77
6.2.8 Filling out the Accident Recording Form (ARF)	78
6.2.8.1 Role of the Admin cell	79
6.2.8.2 Strengths and weaknesses of RADMS	79
6.2.9 National Crime Record Bureau (NCRB) data	80
6.3 CONCLUSIONS	81
CHAPTER 7 ■ Traffic Conflict Techniques: Some Data to Supplement Accident Analysis	89
<small>CHRISTER HYDEN</small>	
7.1 INTRODUCTION	90
7.1.1 The lack of safety assessments	90
7.1.2 The insufficiency of using only accidents in assessment	91
7.1.3 Traffic conflicts — an overview	91
7.2 THE SWEDISH TRAFFIC CONFLICTS TECHNIQUE	94
7.2.1 Training of observers and reliability	94
7.2.2 A new definition of serious conflicts	95
7.2.3 Product validation	97
7.2.4 Process validation	98
7.2.5 Use of the technique	98
7.2.5.1 Recording	98
7.2.5.2 Analysis of conflict studies	98
7.2.6 Example of practical use of conflict, behavioural and interactional studies in India	100
7.2.6.1 Background	100
7.2.6.2 Results	100
7.2.6.3 Output of the project	103
7.2.7 A novel approach to the severity concept	104
7.2.8 Image processing — more conflicts, more information	104
7.2.8.1 Background	104

7.2.8.2	Video analysis system at Lund University (Laureshyn 2010)	105
7.2.8.3	Video analysis system at University of British Columbia (Ismail et al 2009)	105

CHAPTER 8 ■ Statistical Considerations in Road Safety Research 109

SHRIKANT I. BANGDIWALA

8.1	INTRODUCTION	110
8.2	SAMPLING WHAT WE STUDY	111
8.3	NON-CONSTANT EXPOSURE	112
8.4	COUNTING RARE EVENTS	113
8.5	MULTIPLE FACTORS OPERATING IN DIFFERENT PHASES	114
8.6	INTERVENTION APPROACHES – TACKLE THE WORST CASES	115
8.7	INTERVENTION APPROACHES – DESIGN OPTIONS	116
8.8	UNDERSTANDING RELATIONSHIPS – STATISTICAL ANALYSIS	118
8.8.1	Comparing binary variables across groups	120
8.8.2	Comparing count variables across groups and over time	121
8.9	STATISTICAL TESTING AND THE ROLE OF CHANCE	122
8.10	CONCLUDING REMARKS	123

CHAPTER 9 ■ Speed and its Effects on Road Traffic Crashes 127

DINESH MOHAN

9.1	INTRODUCTION	127
9.2	THE EVIDENCE	128
9.2.1	Reaction time	130
9.2.2	Braking distance	130
9.2.3	Relationship of speed to severity of injury sustained by crash victims	130
9.3	SPEED LIMITS	132
9.4	ROAD STRUCTURE AND SPEED	133
9.5	CONCLUSIONS	133

CHAPTER 10 ■ Human Tolerance to Injury: Role of Biomechanics and Ergonomics 137

DINESH MOHAN

10.1	INTRODUCTION	138
10.2	METHODS OF BIOMECHANICS RESEARCH	138
10.2.1	Use of artificial systems	138
10.2.2	Use of volunteers	139
10.2.3	Use of human cadavers	139
10.2.4	Animal experiments	140
10.2.5	Computer models	140
10.3	BIOMECHANICS AND MOTOR VEHICLE OCCUPANT INJURIES	140

10.3.1	Bus safety	141
10.3.2	Safety of road users outside the bus	141
10.3.3	Crashworthiness of Country Specific Motor Vehicles (CSMV)	141
10.4	ERGONOMICS	142
10.4.1	Manual handling	142
10.5	CONCLUSION	143

CHAPTER 11 ■ Safer Vehicle Design 145

SUDIPTO MUKHERJEE and ANOOP CHAWLA

11.1	INTRODUCTION	145
11.1.1	Safety must be engineered	146
11.1.2	Newton's means of safety	146
11.1.3	Slow it down	147
11.1.4	Design for VRU	147
11.2	ADVANCED METHODOLOGIES	147
11.3	CONCLUSIONS	149

CHAPTER 12 ■ Risk Evaluation and Road Safety 151

SYLVAIN LASSARRE

12.1	INTRODUCTION	151
12.2	RISK INDICATORS IN PUBLIC HEALTH	152
12.2.1	Mortality rate and number of years of life lost	153
12.2.2	Factors influencing the mortality rate	154
12.2.2.1	Demographic factors	155
12.2.2.2	Geographical factors	155
12.2.2.3	Mobility factors	156
12.2.2.4	Economic factors	157
12.3	RISK INDICATORS IN ROAD TRANSPORT	160
12.4	MODELS OF ACCIDENT FREQUENCY AND SEVERITY	161
12.5	CONCLUSION	162

CHAPTER 13 ■ Investigating Driving Failures and Their Factors by In-Depth Accident Studies 163

PIERRE VAN ELSLANDE

13.1	INTRODUCTION	164
13.2	IN-DEPTH ACCIDENT STUDY AS A COMPLEMENTARY TOOL FOR ROAD SAFETY	165
13.2.1	Data collection and elaboration	165
13.2.2	A sequential analysis	166
13.2.2.1	The driving phase	166
13.2.2.2	The rupture phase	167
13.2.2.3	The emergency phase	167
