

Table of Contents

Preface	vi
Chapter 1	
Fundamentals of Kinematical X-Ray Scattering Theory	1
Introduction.....	1
The Intensity Scattered by a Crystal.....	2
Correlation Between the Crystal Lattice Planes and the Reciprocal Lattice Vectors	7
Ewald Construction	9
Bragg's Law.....	11
Conclusion	13
Chapter 2	
Crystallite Size Broadening of Diffraction Line Profiles	15
Introduction.....	15
Size Broadening of a Small Crystal.....	17
Bertaut's Theorem.....	23
Relation Between Line Profile and Column Length Distribution	26
Peak Profile for Spherical Crystallites with Different Size Distributions ...	30
The Effect of Anisotropic Shape of Crystallites	35
Conclusion	43
Chapter 3	
Strain Broadening of X-Ray Diffraction Peaks	49
Introduction.....	49
General Effect of Lattice Distortions on Line Profiles	50
Strain Broadening Caused by Dislocations	58
Average Dislocation Contrast Factors for Cubic Crystals	69
Average Dislocation Contrast Factors for Hexagonal Crystals	74
Average Dislocation Contrast Factors for Orthorhombic Crystals	75
Asymptotic Shape of the Line Profile Caused by a Polarised Dislocation Distribution	78

Effect of Triple Junctions and Particle Welding on Line Profiles.....	84
Effect of Surface Relaxation in Nanoparticles on Line Profiles.....	86
Conclusion	93

Chapter 4

Line Profiles Caused by Planar Faults	101
Introduction.....	102
Peak Shape Resulted by Stacking Faults and Twin Boundaries on {111} Planes in FCC Crystals	105
Line Profiles Caused by Twin Boundaries in Hcp Crystals.....	117
Influence of Anti-Phase Boundaries on Peak Broadening in Cu_3Au	131
Conclusion	136

Chapter 5

Influence of Chemical Heterogeneities on Line Profiles	142
Introduction.....	143
The Concept of Compositional Microstrain	143
Evaluation of Chemical Heterogeneities from the Breadths of Line Profiles.....	154
Edgeworth Procedure for the Determination of Asymmetrical Concentration Distribution from Line Profiles.....	159
Evaluation of Concentration Distribution in Decomposed Solid Solution by Line Profile Analysis.....	163
Conclusion	167

Chapter 6

Evaluation Methods of Line Profiles	171
Introduction.....	172
Classical and Modified Warren-Averbach Methods	173
Multiple Whole Profile Fitting.....	181
Classical and Modified Williamson-Hall Methods.....	184
Variance Methods	191
Whole Powder Pattern Fitting and Modeling	195
Convolutional Multiple Whole Profile Fitting.....	199
Conclusion	204

Chapter 7

Peak Profile Evaluation for Thin Films	212
Introduction.....	212
Effect of Coherent Scattering of Nanocrystals on Line Broadening of Textured Films	214
The Influence of Processing Conditions on the Microstructure of Thin Films	225
Conclusion	236

Chapter 8

X-Ray Line Profile Analysis for Single Crystals	242
Introduction.....	243
Intensity Distribution Around the Reciprocal Lattice Points for Single Crystals	243
Determination of Density, Type and Arrangement of Dislocations in Single Crystals from Line Profiles.....	248
Conclusion	265

Chapter 9

Practical Applications of X-Ray Line Profile Analysis	271
Introduction.....	272
Instrumental Correction	273
Determination of Burgers-Vector Population in Hexagonal Materials.....	278
Investigation of Twin Boundary Types in Hexagonal Crystals	286
Interpretation of Crystallite Size Obtained by Line Profile Analysis	287
Comparison of Lattice Defect Densities Obtained by Peak Profile Analysis and Microscopy.....	292
Determination of Vacancy Concentration with the Help of X-Ray Line Profile Analysis	294
Determination of Lattice Defect Structure in Ultrafine-Grained and Nanocrystalline Materials.....	298
Application of X-Ray Line Profile Analysis on Polymers.....	306
Conclusion	307

Compilation of References.....	319
---------------------------------------	------------

About the Author.....	340
------------------------------	------------

Index.....	341
