Contents

Preface ix
Acknowledgments xi
Authors xiii

1 Analysis versus Design through Synthesis 1
1.1 From Make-and-Test to Analysis and Now Synthesis 1
1.2 The Power of Methods of Synthesis 4
1.2.1 Examples 4
1.2.2 Pole Shaping 4
1.2.3 Shaping the Rotor of an Alternator 6
1.2.4 Shaping a Shield 7
1.2.5 Miniaturizing a Transistor 10
1.2.6 Coupled Field Problems: Electroheat 10
1.2.7 Nondestructive Evaluation 13
1.3 What This Book Is About 14

2 Analysis in Electromagnetic Product Design 17
2.1 Numerical Methods 17
2.2 Numerical Approximations versus Exact Methods 20
2.3 Methods of Approximate Solution – Differential and Integral 22
2.4 A Note on Matrix Representation of Polynomials 26
2.5 The Finite Element Method 27
Ingredient 1 28
Ingredient 2 28
Ingredient 3 30
2.6 Uniqueness 34
2.7 Natural Boundary Conditions 35
2.8 One-Dimensional Linear Finite Elements 37
2.9 Two-Dimensional Linear, Triangular Finite Elements 44
2.10 Cholesky's Factorization 52
2.11 A Two-Dimensional Finite Element Program through an Example 54
2.12 Other Equations 59

3 Optimization in Product Design – Synthesis 63
3.1 An Introduction 63
3.2 One-Dimensional Optimization 64
3.2.1 One-Dimensional Search 64
3.2.2 Bisection Search 64
3.2.3 Golden Section Search 65
3.2.4 The Line Search or Univariate Search 67

3.3 N-Dimensional Zeroth-Order Optimization 70
3.3.1 Powell's Method 70
3.3.2 Genetic Algorithm 74
3.3.2.1 Broad Description of the Genetic Algorithm 74
3.3.2.2 Representation in the Genetic Algorithm 75
3.3.2.3 Initialization 77
3.3.2.4 Selection 78
3.3.2.5 Cross Over and Mutation 79
3.3.2.6 Termination 81
3.3.2.7 The Genetic Algorithm Applied to the Ackley Function 83
3.3.3 Simulated Annealing 83
3.4 N-Dimensional First-Order Optimization 85
3.4.1 Gradient Descent or Steepest Descent 85
3.4.2 Conjugate Gradients 88
3.5 A Good Test Problem from Magnetics – The Pole Face 89
3.5.1 Problem Description 89
3.5.2 Expected Solution 92
3.5.3 Choice of Optimization Method 93
3.5.4 Preprocessing the Pole Face 95
3.5.5 Powell's Method – Special Treatment and Constraints 96
3.5.6 Solution by the Genetic Algorithm 99
3.6 A Test Problem from Alternator Rotor Design 100
3.6.1 Problem Definition 100
3.6.2 The Alternator Rotor: Problem Model 104

4 Some Basic Matrix Solution Schemes 109
4.1 Matrix Solution 109
4.2 Matrix Solution by Gaussian Elimination 109
4.3 The SOR Method 112
4.4 The Cholesky-Factorization Scheme 115
4.5 The Conjugate-Gradients Algorithm 117

5 Matrix Computation with Sparse Matrices 127
5.1 The Importance of Efficiency 127
5.1.1 Seeking Efficiency 127
5.1.2 Sparse Matrices 127
5.1.3 Computational Time Savings 129
5.2 Symmetric and Sparse Storage Schemes – Suitable Data Structures 130
5.3 Profile Storage and Fill-in: The Cholesky Scheme 137
5.3.1 Data Structures for Profile Storage 137
5.3.2 Cholesky's Method with Profile Storage 140
5.4 Sparse Storage for SOR 144
5.5 Sparse Storage and the Conjugate Gradients Algorithm 152

5.6 Renumbering of Variables: The Cuthill–Mckee Algorithm 157
5.7 Renumbering and Preconditioning 159

6 Other Formulations, Equations and Elements 161
6.1 Introduction to the Galerkin Method and Function Spaces 161
6.2 The Generalized Galerkin Approach to Finite Elements 163
6.3 Normal Gradient Boundary Conditions in Finite Elements – The Neumann Condition 167
6.3.1 Forced and Natural Boundary Conditions 167
6.3.2 Handling Interior Line Charges in Finite Elements 172
6.3.3 Natural Impedance Boundary Conditions 174
6.4 A Simple Hand-Worked Example 175
6.4.1 A Test Problem with an Analytical Solution 175
6.4.2 Galerkin – Strong Neumann, One Second-Order Element 176
6.4.3 Collocation: Explicit Neumann, One Second-Order Element 177
6.4.4 Least Squares: Strong Neumann, One Second-Order Element 177
6.4.5 Galerkin: Weak Neumann, One Second-Order Element 178
6.4.6 Galerkin: Weak Neumann, Two First-Order Elements 179
6.4.7 Galerkin: Explicit Neumann, Two First-Order Elements 181
6.4.8 Some Observations 182
6.5 Higher-Order Finite Elements 182
6.5.1 Higher-Order Interpolations 182
6.5.2 Differentiation and Universal Matrices 185
6.6 Functional Minimization 191
6.7 Numerical Integration: Quadrature Formulae 196
6.8 Finite Elements and Finite Differences 197
6.9 Sparsity Pattern Computation 198
6.10 Nonlinear Equations 200
6.11 Other Equations and Methods: The Structural Beam and the Bi-Harmonic Equation 201
6.12 Symbolic Algebra 208
6.13 Edge Elements 209
6.14 The Quadrilateral Element 214

7 Parametric Mesh Generation for Optimization 219
7.1 Background and Literature 219
7.2 Mesh Generation 224
7.2.1 Introduction 224
7.2.2 Delaunay-Based Methods 226
7.2.3 Delaunay Triangulation and Constrained Delaunay Triangulation 226

7.3 Algorithms for Constructing a Delaunay Triangulation 227
7.3.1 Speed 227
7.3.2 Divide-and-Conquer Algorithm 227
7.3.3 Sweep Line Algorithm 228
7.3.4 Incremental Insertion Algorithm 228
7.4 Mesh Refinement 229
7.5 Three-Dimensional Mesh Generation 230
7.6 Parameterized Mesh Generation – A New Approach 231
7.7 Data Structure and User Interface 232
7.7.1 Data Structure 232
7.7.2 User Interface and Defining Geometry 234
7.7.3 Post-Processing of Meshing 236
7.7.4 Approach to Renumbering 237
7.7.5 Merge Sort 239
7.7.6 Modified Form of Merge Sort for Renumbering 241
Appendix 1: Sample Input File: Two-Dimensional 242
Appendix 2: Sample Input File: Three-Dimensional 244

8 Parallelization through the Graphics Processing Unit 251
8.1 Parallelization 251
8.2 Optimization with Finite Elements 252
8.3 Finite Element Computation in CUDA C 253
8.4 Solution of Sparse, Symmetric Finite Element Equations 255
8.5 Some Issues in GPU Computation 256
8.6 Conclusions 259

9 Coupled Problems 261
9.1 The Electrothermal Problem 261
9.2 Finite Element Computation for the Electrothermal Problem 265
9.3 GPU Computation for Genetic Algorithms for Electro-Heat Problems 266
9.4 Shaping an Electro-Heated Conductor 268
9.5 Shape Optimization of Two-Physics Systems: Gradient and Zeroth-Order Methods 272
9.6 Electroheating Computation for Hyperthermia 276
9.7 The Hyperthermia Model 278
9.8 A Note on Electrical and Thermal Conductivity Changes 283
9.8.1 Electrical Conductivity 283
9.8.2 Thermal Conductivity 284
9.9 The Algorithm for the Inverse Method for Electroheating 284
