Preface	xix
About the Editor	xxi
About the Contributors	xxiii
PART I Architectural Acoustics Essentials	
Chapter 1 Computational Modeling of Room Acoustics I: Wave-Based Modeling.....	1
U. Peter Svensson, Jonathan Botts, and Lauri Savioja	
1.1 Room Acoustic Modeling	1
1.2 Analytical Solutions	2
1.2.1 Parallelepipedic (Shoebox) Room	4
1.2.2 Modal Solution + Propagating Waves	4
1.2.3 Domain Matching	5
1.3 Numerical Solutions	6
1.3.1 Finite Difference Methods	6
1.3.2 Finite Element and Boundary Element Methods	8
1.3.3 Spectral Methods	8
References	8
Chapter 2 Computational Modeling of Room Acoustics II: Geometrical Acoustics.....	11
U. Peter Svensson, Samuel Siltanen, Lauri Savioja, and Ning Xiang	
2.1 Unifying Frameworks of Geometrical Acoustics	11
2.1.1 Acoustic Radiative Transfer Model	11
2.1.2 Room Acoustic Rendering Equation	12
2.2 Deterministic Modeling of Specular Reflections and Diffractions	14
2.2.1 Image Source Method for a Single Surface	14
2.2.2 Exact Image Source Solution for Shoebox-Shaped Rooms	15
2.2.3 Image Source Method for Arbitrarily Shaped Rooms	17
2.2.3.1 General Algorithm	17
2.2.3.1.1 The Contribution by an Image Source	19
2.2.3.2 Algorithm with Diffraction	19
2.2.3.2.1 Contribution by a First-Order Diffraction ES	20
2.2.4 Beam Tracing	21
2.3 Statistical Modeling of Geometrical Acoustics	23
2.3.1 Ray Tracing	23
2.3.2 Radiance Exchange Methods	25
2.3.3 Diffusion Equation Method	25
References	26

Chapter 3 Acoustics in Long Rooms	29
Jian Kang	
Introduction	29
3.1 Fundamentals of Acoustic Characteristics in Long Rooms.....	30
3.1.1 Ray Theory	31
3.1.2 Wave Theory.....	31
3.1.3 Definition of Long Rooms	32
3.2 Acoustic Simulation of Long Rooms	33
3.2.1 Image Source Model.....	36
3.2.2 Radiosity Model	38
3.2.3 Ray Tracing and Combined Ray Tracing and Radiosity	38
3.3 Acoustic Formulae for Long Rooms.....	38
3.3.1 SPL with Geometrically Reflecting Boundaries.....	40
3.3.2 T_{30} with Geometrically Reflecting Boundaries.....	41
3.3.3 SPL with Diffusely Reflecting Boundaries.....	41
3.3.4 SPL Based on Wave Theory	42
3.3.5 An Empirical SPL Formula	42
3.4 Effects of Designable Factors	42
3.4.1 Sound Distribution	44
3.4.2 Reverberation with a Single Source	47
3.4.3 Reverberation with Multiple Sources	50
3.5 Case Studies Based on Scale Modeling.....	50
3.5.1 Diffusers	52
3.5.2 Absorbers	53
3.5.3 Reflectors and Obstructions	54
3.5.4 Train Noise and the STI in Underground Stations	54
3.6 Case Studies Based on Site Measurements	56
Defining Terms	57
References	58
For Further Information.....	59
Chapter 4 Acoustics in Coupled Volume Systems	59
Ning Xiang	
Abstract	59
4.1 Introduction	60
4.2 Statistical Acoustics Models	62
4.3 Wave-Acoustical Methods.....	64
4.4 Geometrical Acoustics Methods	65
4.5 Diffusion Equation Methods	68
4.6 Experimental Investigations and Analysis Tools.....	71
Summary	71
Acknowledgments.....	71
References	71
Chapter 5 Advanced Measurements Techniques: Methods in Architectural Acoustics	75
Wolfgang Ahnert and Stefan Feistel	
5.1 Overview	75
5.2 Measurement Methods	76

5.2.1	Traditional Sound Level Measurements and Assessment	76
5.2.2	Measurement Techniques Based on Fourier Analysis	77
5.2.2.1	Fundamentals	77
5.2.2.2	Conventional Excitation Signals	79
5.2.2.3	Sweep-Based Measurements	81
5.2.2.4	Noise Applications	82
5.2.2.5	Technique Using Maximum-Length Sequences	83
5.2.2.6	Time-Delay Spectrometry Method	85
5.2.2.7	Measurements Using Arbitrary Excitation Signals	85
5.2.3	Absolute and Relative Measurements, Calibration	89
5.2.3.1	Measurement Parameters	89
5.2.4	Measurement Errors, Optimization, and Limits of Application	90
5.2.4.1	Measurement System and Measurement Chain	91
5.2.4.2	External Influences	91
5.2.4.3	Post-Processing	92
5.3	Room Acoustic Measurements	94
5.3.1	Introductory Comments	94
5.3.2	Selection of Measurement Locations	95
5.3.3	Measurement of Room Acoustic Properties	95
5.3.4	Time Domain Quantities	96
5.3.5	Frequency Domain Quantities	99
5.3.6	Time-Frequency Representation (Waterfall Plots)	99
5.3.7	Special Applications	99
5.3.7.1	Filtering and Averaging	100
5.3.7.2	In Situ Measurement of the Absorption Coefficient	102
5.3.7.3	Measurement of Scattering Coefficients	103
5.3.7.4	Modal Analysis	105
5.4	Applications in Sound Reinforcement	106
5.4.1	Electrical Verification	106
5.4.1.1	Subjective Tests	106
5.4.1.2	Electrical Measurements	107
5.4.2	Acoustic Measurement and Tuning	108
5.4.2.1	Introductory Comment	108
5.4.2.2	SPL Coverage	109
5.4.2.3	Maximum Sound Pressure Level	110
5.4.2.4	Measurement of the Frequency Response	111
5.4.2.5	Measurement of the Speech Intelligibility STI	112
5.4.2.6	Subjective Assessment of Speech Transmission Index Values	114
5.4.2.7	Signal Roughness and Source Mislocalization	114
5.4.2.8	Subjective Assessment	115
5.4.3	Additional Measurements	116
5.4.3.1	Signal Alignment	116
5.4.3.2	Feedback Test	116
5.4.3.3	Polarity Test	116
5.5	Final Remarks	117
	References	117
Chapter 6	Room-Acoustic Energy Decay Analysis	119
	Ning Xiang	

Abstract	119
6.1 Introduction	119
6.2 Integrated Impulse-Response Method	120
6.2.1 Schroeder Integration and Energy-Time Function (Curve)	120
6.2.2 Schroeder Decay Model	122
6.2.3 Characteristics of Schroeder Decay Functions	124
6.3 Truncation Approach	124
6.4 Noise Subtraction	125
6.4.1 Pre-Subtraction	125
6.4.2 Post-Subtraction (Noise Compensation)	126
6.4.3 Least-Squares Fitting for Noise Estimation	127
6.5 Nonlinear Regression	128
6.6 Two Levels of Bayesian Decay Analysis	131
6.6.1 Model Selection: The Second Level of Inference	131
6.6.2 Parameter Estimation: The First Level of Inference	132
6.6.3 Bayesian Information Criterion	132
6.6.4 Advanced Sampling Methods	134
Summary	135
Acknowledgment	135
References	135
Chapter 7 Sound Insulation in Buildings	137
Carl Hopkins	
7.1 Introduction	137
7.2 Airborne Sound Insulation—Direct Transmission	137
7.2.1 Descriptors	137
7.2.2 Solid Plates	138
7.2.3 Cavity Wall and Floor Constructions	142
7.2.4 Wall and Floor Linings	146
7.2.5 Air Paths Due to Holes, Gaps, and Slits	150
7.2.6 Glazing and Windows	150
7.2.7 Doors	152
7.2.8 Combining Sound Reduction Indices for Different Building Elements that Form a Single Surface	153
7.3 Impact Sound Insulation—Direct Transmission	153
7.3.1 Standard Impact Sources	154
7.3.2 Descriptors	157
7.3.3 Solid Plates	157
7.3.4 Timber Floor	157
7.3.5 Floor Coverings	158
7.4 Sound Insulation <i>In Situ</i>	160
7.4.1 Descriptors	160
7.4.1.1 Sound Insulation Within Buildings	160
7.4.1.2 Façade Sound Insulation	162
7.4.2 Flanking Transmission Between Rooms—Airborne Sound Insulation	163
7.4.3 Flanking Transmission Between Rooms—Impact Sound Insulation	168
Acknowledgments	169
References	170

Chapter 8	Auditory Perception in Rooms	173
	Jonas Braasch and Jens Blauert	
8.1	Introduction	173
8.2	Localization of a Single Sound Source	173
8.3	Listening to Multiple Sound Sources	178
8.3.1	The Precedence Effect	179
8.3.2	Spatial Impression	181
8.3.3	Instrumental Indices for Perceptual Assessment of Rooms	185
8.3.4	Limitations of the Room-Impulse-Response Concept	189
8.4	The <i>Quality of the Acoustics</i>	190
	Conclusion	193
	Acknowledgments	193
	References	193
Chapter 9	Auralization	197
	Michael Vorländer	
9.1	Introduction	197
9.2	Definitions and Standards in Architectural Acoustics	198
9.2.1	Impulse Responses in Rooms	198
9.2.2	Sound Transmission Between Rooms	199
9.2.3	Structure-Borne Sound in Buildings	199
9.3	Audio Signal Processing for Architectural Acoustics	200
9.3.1	Discrete and Fast Fourier Transformation	201
9.3.2	Convolution	202
9.4	The Concept of Auralization	203
9.4.1	Source Characterization	205
9.4.2	Filter Construction	206
9.4.2.1	Filter Design from Room Impulse Response Data	206
9.4.2.2	Filter Design from Sound Transmission Data	209
9.4.2.3	Filter Design from Impact Sound Data	211
9.4.3	Spatial Sound Reproduction	212
9.5	Challenges and Limitations	213
9.5.1	Level of Detail of the Room Model	214
9.5.2	Diffraction and Seat-Dip Effect	214
9.5.3	Uncertain Absorption	215
9.5.4	Modes	215
9.6	Real-Time Processing for Virtual Room Acoustics	215
	Defining Terms	216
	References	218
	For Further Information	219
Chapter 10	Room-Related Sound Representation Using Loudspeakers	221
	Jens Blauert and Rudolf Rabenstein	
10.1	Introduction	221
10.2	Intensity Stereophony	222
10.3	Amplitude-Difference Panning	224
10.4	Surround	227
10.5	Spherical-Harmonics Synthesis	228
10.5.1	Classical Ambisonics	228

10.5.2	Higher-Order Ambisonics	230
10.6	Wave-Field Synthesis	233
10.7	Binaural-Cue Selection	235
10.8	Discussion and Conclusions	238
	Final Remarks	240
	Acknowledgments	240
	References	240
Chapter 11	Environmental Acoustics	243
	Jian Kang	243
	Introduction	243
11.1	Environmental Sound Propagation and Noise Mapping	243
11.1.1	Source Model	244
11.1.2	Geometrical Divergence with Point, Line, and Plane Sources	244
11.1.3	Ground Attenuation	245
11.1.4	Atmospheric Absorption	245
11.1.5	Vegetation	245
11.1.6	Noise Barriers: Basic Configurations	246
11.1.7	Noise Barriers: Strategic Design	248
11.1.8	Noise Mapping	248
11.2	Micro-Scale Sound Propagation	249
11.2.1	Image Source Method	249
11.2.2	Ray-Tracing	250
11.2.3	Radiosity Model	252
11.2.4	Transport Theory	252
11.2.5	Wave-Based Models	253
11.2.6	Empirical Formulae	253
11.2.7	Meso-Scale Models	253
11.2.8	Auralization	254
11.2.9	Physical Scale Modeling	254
11.2.10	Noise Control in Street Canyons	256
11.2.11	Noise Control in Urban Squares	257
11.2.12	Vegetation in Urban Context	257
11.3	Environmental Noise Indicators and Standards	257
11.3.1	Indicators	258
11.3.2	Standards and Regulations	259
11.4	Noise Perception	260
11.5	Urban Soundscape	261
11.5.1	Sound	262
11.5.2	Space	262
11.5.3	People	264
11.5.4	Environment	264
11.5.5	A Framework for Soundscape Description	265
	For Further Information	265
	References	265

PART II Architectural Acoustics Practice

Chapter 12	Sound System Design and Room Acoustics	269
	Wolfgang Ahnert	
12.1	Basics in Room Acoustics	270
12.1.1	Subjective Assessment of the Quality of Sound Events	270
12.1.2	Acoustic and Sound System Design Criteria and Quality Parameters in Rooms	271
12.1.2.1	Reverberation Time	271
12.1.2.2	Energy Criteria	275
12.1.2.2.1	Principal Measures for Speech Transmission	277
12.1.2.2.2	Measures for Music Reproduction	283
12.1.2.2.3	Measures for Music and Speech Reproduction and Binaural Measures	284
12.1.3	Basics in Sound Propagation for Sound System Design in Open Spaces	289
12.1.3.1	Auditory Localization	294
12.1.3.2	Effect of High Loudness Levels on the Auditory System	295
12.1.3.2.1	Mechanism of Hearing Impairment	295
12.1.3.2.2	Causes for High Sound Levels in Sound Reinforcement Systems	296
12.1.3.2.3	Possibilities for Reducing Excessive Sound Levels	296
12.2	Limits of Sound Systems in Rooms	297
12.2.1	Level Restrictions	297
12.2.2	Primary and Secondary Structures of Spaces and Noise Floor Considerations	298
12.2.3	Mono or Multipurpose Spaces	301
12.3	How to Design a Sound System	303
12.3.1	Introduction	303
12.3.2	Acoustic Sources and Loudspeaker Systems	303
12.3.2.1	Point Sources	303
12.3.2.2	Sound Columns	309
12.3.2.3	Line Arrays	311
12.3.2.4	Digitally Controlled Line Arrays	312
12.3.3	Receivers and Microphone Systems	313
12.3.3.1	Acoustic Evaluation with Human Ears	313
12.3.3.2	Microphones	313
12.3.3.2.1	Sensitivity	314
12.3.3.2.2	Directivity Behavior	314
12.3.4	Sound Processing Equipment	315
12.3.4.1	Delay Equipment	315
12.3.4.2	Effect Devices	316
12.3.4.3	Reverberation Equipment	316
12.3.4.4	Feedback Suppressor	318
12.3.4.4.1	Use of Narrow Band Filters	318
12.3.4.4.2	Frequency Shifter	319
12.3.4.5	Filters	319
12.4	Calculation of Sound Reinforcement Systems	321
12.4.1	Analytic Sound Level Calculation	322
12.4.1.1	Free Field (Direct Field of the Loudspeaker)	322

12.4.1.2	Diffuse Field	322
12.4.1.3	Real Rooms	323
12.4.1.4	Conclusions for the Practice	323
12.4.2	Basic Tools and Parameters for Computer-Based Calculations	324
12.4.2.1	Computer Models	324
12.4.2.1.1	Wall Materials	324
12.4.2.1.2	Transducer Data for Acoustic Simulation	328
12.5	Computer-Based Calculation of Sound Level and Other Parameters	334
12.5.1	Room Acoustic Simulation	334
12.5.1.1	Statistical Approach	334
12.5.1.1.1	Reverberation Time	335
12.5.1.1.2	Objective Room Acoustic Measures	335
12.5.1.2	Ray-Tracing Approach	336
12.5.1.3	Results of All of These Calculations	337
12.5.2	Sound System Design	337
12.5.2.1	Aiming	338
12.5.2.2	Time-Arrivals, Delay, and Alignment	342
12.5.2.3	SPL Calculations	343
12.5.2.4	Mapping, Single-Point Investigations	346
12.5.3	Auralization	346
12.5.3.1	Useful Application of Auralization	347
12.5.3.2	Limits and Abuse of Auralization	347
	Summary	347
	References	347
Chapter 13	Noise Control in Heating, Ventilation, and Air Conditioning Systems	351
	Douglas Sturz	
13.1	Noise Criteria	351
13.2	Duct-Borne Noise Transmission	352
13.2.1	Sound Attenuation in Straight Ducts	353
13.2.2	Sound Attenuation by Duct Divisions	354
13.2.3	Sound Attenuation by Duct Cross Section Area Changes	354
13.2.4	Sound Attenuation by Elbows	354
13.2.5	Prefabricated Silencers	355
13.2.6	Sound Attenuation by Plenums	356
13.2.7	Room Effect	357
13.3	Flow Noise in Ducted Systems	357
13.3.1	Main Duct System Design	357
13.3.2	Diffuser and Grille Selection	359
13.4	Noise Break-Out/Break-In	359
13.5	Fans	360
13.6	Terminal Boxes/Valves	361
13.7	Vibration Isolation Considerations for Building Mechanical Systems	362
13.8	Outdoor Noise Emissions	364
	References	365
Chapter 14	Acoustical Design of Worship Spaces	367
	Ewart A. Wetherill	
14.1	Introduction	367
14.2	Fundamentals and Principles	368

14.2.1	Requirements for Good Hearing	368
14.2.1.1	Quiet Background	368
14.2.1.2	Adequate Loudness	368
14.2.1.3	Suitable Reverberation	368
14.2.1.4	Good Distribution of Sound	369
14.2.2	Sound Propagation Outdoors	369
14.2.3	Sound Distribution in a Room	370
14.2.3.1	Acoustical Properties of Materials	370
14.2.3.2	Sound Transmission Loss	371
14.2.4	Planning for a New Building	371
14.2.5	Selection of Acoustical Criteria	372
14.2.5.1	Use of Octave-Band Analysis	372
14.2.5.2	Criteria for Background Noise	372
14.2.5.3	Criteria for Reverberation	374
14.2.6	Control of Outdoor Noise	374
14.2.6.1	Site Evaluation	374
14.2.6.2	<i>Outdoor Noise Level Minus Indoor Level Is Required</i> <i>Minimum Noise Reduction</i>	375
14.2.6.3	Outdoor Equipment Noise	375
14.2.6.4	Noise Created by Building Enclosure	375
14.2.7	Control of Indoor Noise	375
14.2.7.1	Noise Control Between Spaces	375
14.2.7.2	Limitations of Divisible Spaces	377
14.2.7.3	Control of Vibration and Structure-Borne Noise	377
14.2.7.4	Impact Noise Control	377
14.2.8	Ventilation and Air Conditioning Noise Control	377
14.2.8.1	Control of Equipment Noise	377
14.2.8.2	Control of Fan Noise in Ductwork	377
14.2.8.3	Air Distribution—Supply and Return	378
14.2.8.4	Nonducted Air Return	379
14.2.9	Other Equipment Noise	379
14.2.10	Acoustics of Sanctuary	379
14.2.10.1	Background Noise Level	379
14.2.10.2	Size and Shape of Space	379
14.2.10.3	Sound Reflecting and Absorbing Materials	380
14.2.10.4	Reverberation Time	380
14.2.10.5	Requirements for Speech	381
14.2.10.6	Requirements for Music	381
14.2.10.7	Choir Rehearsal Room	381
14.2.10.8	Accommodating Nonworship Events	381
14.3	Applications to Design and Construction	382
14.3.1	Transition from Design to Construction	382
14.3.2	Site Noise Control	382
14.3.2.1	Site Noise Measurements	382
14.3.2.2	Building Enclosure	383
14.3.2.3	Outdoor Air Conditioning Equipment	383
14.3.3	Control of Indoor Noise	385
14.3.3.1	Noise Isolation Between Spaces	385
14.3.3.2	Movable Partition Details	385

14.3.3.3	Impact Noise Control	385
14.3.3.4	Ventilation and Air Conditioning Noise Control	386
14.3.3.5	Air Distribution Noise Control	386
14.3.4	Acoustics of Sanctuary	388
14.3.4.1	Size and Shape of Sanctuary	388
14.3.4.2	Organ and Choir	389
14.3.4.3	Related Design Requirements	390
14.3.4.4	Sound Reflecting and Absorbing Materials	390
14.3.4.5	Reverberation Time	391
14.3.4.6	Estimation of Reverberation Time	392
14.3.4.7	Choir Rehearsal Room	393
14.3.4.8	Sound Amplification	394
14.3.4.9	Adapting for Other Events	394
14.3.5	Remodeling of Existing Facilities	395
14.3.6	Getting Things Built Properly	396
14.3.6.1	Contractual Arrangements	396
14.3.6.2	Importance of Details	396
14.3.6.3	Ambiguities in Terminology	396
14.3.6.4	Value Engineering	397
14.3.6.5	Design Build	397
14.3.6.6	Bidding Period	397
14.3.6.7	Monitoring Construction	397
14.3.6.8	Acceptance Testing of Facilities	398

Chapter 15	Performing Arts Spaces	401
	Ronald L. McKay, David Conant, and K. Anthony Hoover	
Prologue		401
A. Types of Spaces		401
B. Chapter Sections		401
C. Obtaining Desired Results		402
Chapter 15	Unit I Music Performance Spaces	403
	Ronald L. McKay	
15.I.1	Introduction	403
15.I.2	Basics for All Music Performance Halls	403
15.I.2.1	Design and Construction Processes	403
15.I.2.2	Background Noise	404
15.I.2.3	Seating Capacities	404
15.I.2.4	Reverberation and Reverberation Times	405
15.I.2.5	Hall Volume	409
15.I.2.6	Hall Finish Materials	410
15.I.2.6.1	Floors and Chairs	410
15.I.2.6.2	Walls, Balcony Faces, Ceilings, and Soffits	411
15.I.2.7	Basic Hall Shaping	413
15.I.2.7.1	What Not to Do	413

15.1.2.7.2	Appropriate and Uniform Loudness	413
15.1.2.7.3	Sound Arrival Times at Audience Members and Performers	415
15.1.2.7.4	Lateral Sound Reflections to the Audience	417
15.1.2.8	Platform and Stage Planning	419
15.1.2.9	Audience Seating Configurations	423
15.1.2.10	Clouds and Canopies	425
15.1.2.11	Detailed Surface Shaping	428
15.1.3	Design Highlights: Concert, Recital, and Pipe Organ Halls	430
15.1.3.1	Introduction	430
15.1.3.2	Platform Designs	430
15.1.3.2.1	Concert Halls	430
15.1.3.2.2	Recital Halls	430
15.1.3.2.3	Concert Pipe Organ Halls	430
15.1.3.3	Hall Shaping and Materials	433
15.1.3.4	Examples	433
15.1.4	Design Highlights: Multipurpose Halls with Variable Acoustics	437
15.1.4.1	Introduction	437
15.1.4.2	The Problems	437
15.1.4.3	The Solutions and Key Details for a Concert Hall	439
15.1.4.4	The Solutions and Key Details for a Multipurpose Hall	440
15.1.4.5	Examples	441
15.1.5	Design Highlights: Opera Houses	445
15.1.5.1	Introduction	445
15.1.5.2	Stage and Orchestra Pit Design	446
15.1.5.3	Hall Shaping and Materials	446
15.1.5.3.1	Seating Capacity/House Size	446
15.1.5.3.2	Proscenium Size and Form	446
15.1.5.3.3	Basic Hall Shaping and Materials	448
15.1.5.4	Examples	451
15.1.6	Design Highlight: Halls for World, Country, Jazz, and Popular Music	451
15.1.6.1	Introduction	451
15.1.6.2	Basic Concepts	451
15.1.6.3	Author's Assorted Impressions	454
15.1.6.3.1	Broadway-Style Theaters	454
15.1.6.3.2	Fortunate Halls	454
15.1.6.3.3	Las Vegas-Style Showrooms	454
15.1.6.3.4	Jazz Venues and Nightclubs	455
15.1.6.3.5	Ballrooms and Dance Halls	455
15.1.8	Further Reading	455
15.1.8.1	Books	455
15.1.8.2	Papers in Technical Journals	456
Chapter 15	Unit II Dramatic Arts Spaces	457
	David A. Conant	
15.II.1	Introduction	457
15.II.2	What You Need to Know: Broad Design Principles	458
15.II.2.1	Source → Path → Receiver	458
15.II.2.1.1	Source	458
15.II.2.1.2	Travel Path(s)	458

15.II.2.1.3	Receiver	459
15.II.2.2	Speech Intelligibility Descriptors	459
15.II.2.3	Aberrant Reflections	459
15.II.2.4	Guideline for Assessing and Designing for Individual Reflection Strength	460
15.II.3	Three Basic Theater Forms	460
15.II.3.1	The Proscenium Theater	464
15.II.3.1.1	Characteristic Elements	464
15.II.3.1.1.1	The Proscenium Opening	464
15.II.3.1.1.2	Catwalks and Tension Grids	466
15.II.3.1.1.3	Seating Above Orchestra Level	467
15.II.3.1.1.4	Orchestra Pit	467
15.II.3.1.2	Design Principles for Proscenium Theaters	468
15.II.3.1.2.1	General Design Guidelines	468
15.II.3.1.3	Example: South Mountain Community College Theater	471
15.II.3.2	Thrust Stage Theater Design	473
15.II.3.2.1	Characteristic Elements	473
15.II.3.2.1.1	Stage Sets and Orchestra Pits	473
15.II.3.2.1.2	Catwalks and Tension Grids	473
15.II.3.2.2	Design Principles for Thrust Stage Theaters	474
15.II.3.2.2.1	General Design Guidelines	474
15.II.3.2.3	Example: Bistline Theater at Idaho State University	476
15.II.3.2.3.1	Design Attributes and Features	476
15.II.3.3	Experimental Theaters	478
15.II.3.3.1	Characteristic Elements	478
15.II.3.3.2	Design Principles for Experimental Theaters	478
15.II.3.3.2.1	General Design Guidelines	478
15.II.3.3.3	Example: South Mountain Community College Studio Theater	481
15.II.3.3.3.1	Design Attributes	481
15.II.3.3.3.2	Design Features	482
15.II.4	Considerations for Opera and Musical Theater (Addressing Pits and Eyebrows)	482
15.II.4.1	Issues of Balance and Communications of Stage Voices with Pit Musicians	482
15.II.4.1.1	The Pit Design	483
15.II.4.1.2	The Eyebrow Design	483
15.II.5	Considerations Unique to Nonprofessional Venues (Addressing the Nonprofessional Vocal Effort in Training As Well As Professional Voices)	484
15.II.5.1	Acoustical Criteria	484
15.II.5.2	Value Extraction Considerations	485
15.II.5.3	Specific Additional Design Guidance	485
15.II.5.3.1	Construction and Finish Materials	485
15.II.5.3.2	Variable Acoustics	485
15.II.5.3.3	Control Room	486
15.II.5.3.4	More Audio	486

Chapter 15	Unit III Music Education Spaces	489
	K. Anthony Hoover	
15.III.1	Introduction	489
15.III.2	General Isolation Concerns	490
15.III.3	General Mechanical System Noise and Vibration Concerns	491
15.III.4	General Surface Treatments and Shaping Concerns	494
15.III.5	Electroacoustics	495
15.III.6	Acoustical Criteria	495
15.III.6.1	Sound Isolation: Sound Transmission Class (STC)	495
15.III.6.2	HVAC Noise: NC (Noise Criteria)	496
15.III.6.3	Surface Treatments: NRC (Noise Reduction Coefficient)	496
15.III.7	Types of Spaces	497
15.III.7.1	Classrooms	497
15.III.7.2	Faculty Offices	498
15.III.7.3	Practice Rooms	499
15.III.7.4	Ensemble Rooms	501
15.III.7.5	Large Rehearsal Rooms	502
15.III.7.6	Critical Listening Rooms	504
15.III.7.7	Recording Studios	505
15.III.7.8	World Music Rooms	507
15.III.7.9	Libraries	508
15.III.7.10	Lobbies/Atriums	508
	Common Ground for Discussion	509
	Further Reading	509
