

Table of Contents

Preface	v
Chapter 1: Getting Started with ArcGIS	1
Hardware and software requirements	2
Hardware requirements	2
Software requirements	4
Installing ArcGIS for Desktop	4
Obtaining a 60-day trial of ArcGIS for Desktop	5
Installing on Windows	8
Exploring ArcGIS for Desktop	11
ArcCatalog	12
ArcMap	15
ArcToolbox	22
Getting help	23
Summary	24
Chapter 2: Using Geographic Principles	25
Using coordinate systems	25
The ellipsoidal coordinate system	26
The spherical coordinate system	28
The spherical polar coordinate system	29
The three-dimensional (3D) Cartesian coordinate system	30
Geodetic datum and geoid	31
Global and regional datums	31
The geoid and heights	32
Using a coordinate reference system	33
Using map projections	46
Classifying map projections	46

Comparing map projections	47
Cylindrical projections	48
Conic projections	51
Azimuthal projections	54
Transforming coordinate reference systems	57
Summary	63
Chapter 3: Creating a Geodatabase and Interpreting Metadata	65
Creating a geodatabase	65
Components of a geodatabase	66
Creating a file geodatabase	68
Importing existing data	69
Evaluating existing data	70
Defining a geodatabase structure	73
Adding data to a geodatabase	74
Documenting a geodatabase using metadata	85
Creating metadata	87
Importing metadata	92
Summary	97
Chapter 4: Creating Map Symbology	99
Creating symbols	99
Creating point symbols	101
Creating line and area symbols	110
Creating labels	118
Working with graphic text	118
Working with dynamic labels	121
Creating a thematic map	129
Summary	133
Chapter 5: Creating and Editing Data	135
Creating and editing features	135
Editing features	136
Creating and editing map topology	146
Using spatial adjustment	151
Creating and editing attribute data	155
Editing the feature attributes	155
Creating and calculating an attribute field	158
Creating new features	160
Digitizing features	160
Creating point features using XY data	164
Summary	167

Chapter 6: Analyzing Geographic Data and Presenting the Results	169
Planning the data analysis and preparing data	169
Planning data analysis	170
Defining the problem	170
Identifying the conditions	170
Identifying the necessary data	170
Planning the analysis process	171
Preparing data for analysis	172
Performing the analysis	183
Attribute queries	183
Location queries	188
Creating a data report	193
Summary	200
Chapter 7: Working with Geoprocessing Tools and ModelBuilder	201
Working with Geoprocessing tools	201
Planning data analysis	202
Preparing data for analysis	204
Performing site selection	209
Sharing the analysis results	217
Working with ModelBuilder	219
Creating a model	220
Using a model	227
Summary	229
Chapter 8: Using Spatial Analyst and 3D Analyst	231
Using Spatial Analyst	232
Performing suitability analysis	233
Performing a least-cost path analysis	240
Using 3D Analyst	246
Creating a TIN surface	246
Creating 3D features from 2D features	250
Calculating surface area and volume	254
Summary	258
Chapter 9: Working with Aerial and Satellite Imagery	259
Using aerial imagery	259
Georeferencing an orthorectified image	260
Using satellite imagery	265
Accessing imagery	266

Displaying multispectral imagery	277
Image processing	281
Summary	288
Chapter 10: Designing Maps	289
<hr/>	
Working with the map layout	289
Creating a map layout	290
Designing the map elements	296
Creating an inset map	304
Exporting the Map	308
Working with map templates	312
Applying a map template	313
Modifying the map template	316
Summary	319
Index	321
<hr/>
