<i>Preface to the First Edition</i>	v
<i>Preface to the Second Edition</i>	vii
<i>Preface to the Third Edition</i>	ix
<i>About the Author</i>	xi
1. Why Record Spectra of Astronomical Objects?	1
1.1 A Historical Introduction	1
1.2 What One Can Learn from Studying Spectra	3
2. The Nature of Spectra	9
2.1 Transitions	9
2.2 Absorption and Emission	10
2.3 Other Measures of Transition Probabilities	12
2.4 Stimulated Emission	12
2.5 Optical Depth	13
2.6 Critical Density	14
2.7 Wavelength or Frequency?	15
2.8 The Electromagnetic Spectrum	17

3.	Atomic Hydrogen	21
3.1	Overview	21
3.2	The Schrödinger Equation of Hydrogen-Like Atoms	22
3.3	Reduced Mass	22
3.4	Atomic Units	23
3.5	Wavefunctions for Hydrogen	24
3.6	Energy Levels and Quantum Numbers	24
3.7	H-Atom Discrete Spectra	28
3.8	H-Atom Spectra in Different Locations	34
3.8.1	Balmer series	34
3.8.2	Lyman series	38
3.8.3	Infrared lines	40
3.9	H-Atom Continuum Spectra	40
3.9.1	Processes	40
3.9.2	H-atom emission in H II regions	42
3.10	Radio Recombination Lines	43
3.11	Radio Recombination Lines for Other Atoms	44
3.12	Angular Momentum Coupling in the Hydrogen Atom	48
3.13	The Fine Structure of Hydrogen	50
3.14	Hyperfine Structure in the H Atom	51
3.15	Allowed Transitions	53
3.16	Hydrogen in Nebulae	54
4.	Complex Atoms	57
4.1	General Considerations	57
4.2	Central Field Model	58
4.3	Indistinguishable Particles	60
4.4	Electron Configurations	61
4.5	The Periodic Table	63
4.6	Ions	65
4.7	Angular Momentum in Complex Atoms	66
4.7.1	L-S or Russell-Saunders coupling	66

4.7.2	j - j coupling	68
4.7.3	Why two coupling schemes?	68
4.8	Spectroscopic Notation	69
4.9	Parity of the Wavefunction	70
4.10	Terms and Levels in Complex Atoms	71
5.	Helium Spectra	77
5.1	He I and He II Spectra	77
5.2	Selection Rules for Complex Atoms	79
5.3	Observing Forbidden Lines	82
5.4	Grotrian Diagrams	83
5.5	Potential Felt by Electrons in Complex Atoms	85
5.6	Emissions of Helium-Like Ions	87
6.	Alkali Atoms	91
6.1	Sodium	91
6.2	Spin-Orbit Interactions	95
6.3	Fine Structure Transitions	99
6.4	Astronomical Sodium Spectra	100
6.5	Other Alkali Metal-Like Spectra	104
7.	Spectra of Nebulae	111
7.1	Nebulium	112
7.2	The Bowen Mechanism	116
7.3	Two Valence Electrons	120
7.4	Autoionisation and Recombination	121
8.	Spectra in Magnetic Fields	129
8.1	Uniform Magnetic Field	130
8.2	Strong Magnetic Field	131
8.3	Weak Magnetic Field	132
	8.3.1 The normal Zeeman effect	132
	8.3.2 The anomalous Zeeman effect	133
8.4	Spectra in Magnetic Fields	135

9.	X-Ray Spectra	139
9.1	Inner Shell Processes	140
9.2	The Solar Corona	142
9.3	The Structure of Highly Ionised Atoms	145
9.4	Isotope Effects	146
10.	Line Profiles	151
10.1	Overview	151
10.2	Natural Broadening	152
10.3	Doppler Broadening	152
10.4	Pressure Broadening	153
10.5	Other Broadening Mechanisms	155
10.6	Optical Thickness Effects	156
10.7	Self-absorption	156
10.8	Inflows and Outflows	158
10.9	P Cygni Profiles	160
11.	Molecular Structure	163
11.1	The Born–Oppenheimer Approximation	164
11.2	Electronic Structure of Diatomics	166
11.2.1	Labelling of electronic states	168
11.2.2	Symmetry	170
11.2.3	State labels	172
11.3	Schrödinger Equation	172
11.3.1	Nuclear motion in diatomic molecules	173
11.4	Fractionation	178
11.5	Vibration–Rotation Energy Levels	179
11.6	Temperature Effects	182
11.6.1	Rotational state populations	182
11.6.2	Vibrational state populations	184
11.6.3	Electronic state populations	185

12. Rotational Spectra	187
12.1 Rotational Structure of Polyatomic Molecules	188
12.2 Dipole-Allowed Pure Rotational Transitions	191
12.3 Selection Rules	192
12.4 Isotope Effects	197
12.5 Rotational Spectra of Other Molecules	198
12.6 Rotational Spectra of Molecular Hydrogen	201
12.7 Maser Emissions	202
13. Vibration–Rotation Spectra	207
13.1 Vibrations in Polyatomic Molecules	207
13.2 Vibrational Transitions	209
13.2.1 Structure of the spectrum	211
13.2.2 Isotope effects	213
13.2.3 Hydrogen molecule vibrational spectra	215
13.3 Astronomical Spectra	215
14. Electronic Spectra of Diatomic Molecules	221
14.1 Electronic Transitions	221
14.2 Selection Rules	222
14.2.1 Vibrational selection rules	225
14.2.2 Rotational selection rules	225
14.3 Transition Frequencies	226
14.4 Astronomical Spectra	228
14.5 Non- $^1\Sigma$ Electronic States	229
<i>Solutions to Model Problems</i>	235
<i>Further Reading and Bibliography</i>	255
<i>Index</i>	257
