

Table of Contents

Introduction	ix
Chapter 1. The Fundamentals of Sustainable Transport	1
1.1. The ingredients of sustainable transport	1
1.2. Towns, territories and sustainable transport	12
1.3. Energy and sustainable transport	16
1.4. The environment and sustainable transport	25
1.4.1. "Sensitive" pollutants	26
1.4.2. Greenhouse gases	31
1.5. Material and sustainable transport	32
1.6. A "committed" change in Europe and elsewhere?	34
1.7. Toward a better understanding of the impacts of transport	40
1.8. A strategy for sustainable transport	44
Chapter 2. Vehicles: An Element of the Solution for Sustainable Transport	45
2.1. Technology: from evolution to revolution	45
2.2. Combustion engines	53
2.3. Environmental and energy efficiency	58
2.4. Hybridization and electrification	66
2.4.1. Vehicles	66
2.4.2. Batteries	74
2.4.3. Constraints for recharging	78
2.5. Energy solutions	80
2.5.1. Fuels (refer to the glossary for alternative fuels)	81
2.5.2. Emerging solutions	84

2.6. Noise emissions	85
2.6.1. Overall vehicle noise	85
2.6.2. Noise reduction	89
2.6.3. Noise regulation and its impact on noise environment . . .	92
2.7. The intelligent vehicle: “safe-smart-secure”.	96
2.8. Sustainable vehicles and transport	99
Chapter 3. A Systemic Approach to Transport Schemes	103
3.1. Transport corridors	104
3.2. Transport mode, effective velocity and distance traveled	112
3.3. Articulating modes and scales	118
3.4. Transport scenarios	121
3.4.1. Scenario 1: private transport	123
3.4.2. Scenario 2: organized public transport	124
3.4.3. Comparison of the two scenarios	127
3.5. The transport of goods	129
3.6. The prospects for sustainable transport.	132
Chapter 4. Can We Organize Sustainable Mobility?	135
4.1. Understanding mobility.	137
4.2. Principles of sustainable mobility	141
4.3. Massification	145
4.4. Developing, pooling and using data to attain sustainable mobility.	149
4.5. Mobility and urban planning.	153
4.6. Urban mobility of people, example of multimodality	158
4.7. Intercity mobility of people	163
4.8. Logistics: the mobility vector of merchandise	166
4.9. The re-appropriation of urban logistics.	171
4.10. Intercity logistics: squaring the circle?	176
4.11. Paradoxes and mirrors of sustainable mobility	187
Chapter 5. Innovation Projects for Sustainable Transport Systems	191
5.1. Dealing with the transport system through the multistakeholder approach.	191
5.1.1. LUTB Transport & Mobility Systems think tanks (see the appendix about LUTB)	193
5.2. Transport systems and energy	195
5.2.1. Electric charging stations	197

5.2.2. Other fast charging	201
5.2.3. Toward electric motorways?	204
5.2.4. Other energy solutions	207
5.3. Transportation systems and architecture	210
5.4. Intelligent transport systems (<i>ITS</i>)	214
5.4.1. Several European projects on intelligent transport	219
5.4.2. Linking of systemic layers of intelligence	223
5.4.3. Toward an interoperable continuous chain	227
5.4.4. Man–master on board?	228
5.5. The integration of transport systems, services and transport solutions	230
5.5.1. Development of equipment.	231
5.5.2. Development of services	234
5.5.3. Transport solutions	236
5.5.4. Innovations in operation and supervision	240
5.5.5. The linking of systems in a mobility solution.	242
5.6. Application prospects	244
Chapter 6. Public Policies, Economics and Sustainable Transport	249
6.1. From global to local	249
6.1.1. Impact on climate	250
6.2. European transport policy	253
6.2.1. Research support.	258
6.2.2. Taxation and financial policy	260
6.3. Link between the European level and local level	261
6.4. Public policy and economics	265
Conclusions – Directions	269
Bibliography	277
Glossary for Alternative Fuels	295
Appendix–LUTB Transport and Mobility Systems.	299
Index	305
