

Contents

1 Start of Research-Oriented Study	1
1.1 Needs for Research-Oriented Study	1
1.2 Case Studies and Associated Problems	3
1.2.1 Preliminary Study of a Tethered Satellite	3
1.2.2 Design of a Hydro-Elastic Vibration Isolation System	7
1.2.3 Two Kinds of Immovable Points in a Vibration System	10
1.2.4 Identical Natural Frequencies of Different Structures	13
1.2.5 Closely Distributed Natural Modes of a Symmetric Structure	16
1.2.6 Transient Response of a Slender Structure	19
1.3 Scope and Style of the Book	21
1.4 Further Reading and Thinking	23
2 Preparation of Research-Oriented Study	25
2.1 Briefs of Beauty of Science	25
2.2 Beautiful Features of Vibration Mechanics	27
2.2.1 Unity	27
2.2.2 Simplicity	29
2.2.3 Regularity	31
2.2.4 Symmetry	35
2.2.5 Singularity	39
2.3 Enlightenment of Beauty of Vibration Mechanics	43
2.3.1 Methods of Thinking	43
2.3.2 Aesthetic Literacy	48
2.4 Concluding Remarks	49
2.5 Further Reading and Thinking	50
3 Models of Vibration Systems	51
3.1 Continuous Systems and Their Discrete Models	52
3.1.1 Dynamic Models of Continuous Systems	52
3.1.2 Preconditions of Discretization	59
3.1.3 Case Studies of Discretization	65
3.1.4 Concluding Remarks	71

3.2	A Half Degree of Freedom of Discrete Systems	72
3.2.1	Degeneration of a Degree of Freedom	73
3.2.2	Conventional Concept of Degree of Freedom	74
3.2.3	Degree of Freedom Based on Accessible Manifolds	76
3.2.4	Demonstrative Systems with a Non-holonomic Constraint	80
3.2.5	Demonstrative Systems with Two Non-holonomic Constraints	87
3.2.6	Concluding Remarks	94
3.3	Structural Damping	95
3.3.1	Frequency-Invariant Damping and Its Limitations	96
3.3.2	Frequency-Variant Damping Model and System Response	99
3.3.3	An Approximate Viscous Damping Model	101
3.3.4	An Approximate Viscoelastic Damping Model	103
3.3.5	Concluding Remarks	110
3.4	Further Reading and Thinking	110
4	Vibration Analysis of Discrete Systems	113
4.1	Vibration Systems with Non-holonomic Constraints	114
4.1.1	Dynamic Analysis in Time Domain	114
4.1.2	Dynamic Analysis in Frequency Domain	126
4.1.3	Concluding Remarks	130
4.2	Node Number of a Natural Mode Shape	131
4.2.1	Reexamination of Current Results	132
4.2.2	Rules of Node Numbers of 2-DoF Systems	137
4.2.3	Design Feasibility of Nodes in a Mode Shape	142
4.2.4	Concluding Remarks	145
4.3	Anti-resonances of a Harmonically Excited System	145
4.3.1	Anti-resonances of 2-DoF Systems	147
4.3.2	Mechanisms Behind Two Kinds of Anti-resonances	148
4.3.3	Design Feasibility of Anti-resonances	152
4.3.4	Concluding Remarks	158
4.4	Dynamic Modifications of a System	158
4.4.1	Frequency Response of a Composite System	159
4.4.2	Adjusting an Anti-resonance of a Primary System	162
4.4.3	Adjusting Resonances of a Primary System	165
4.4.4	Concluding Remarks	172
4.5	Further Reading and Thinking	173
5	Natural Vibrations of One-Dimensional Structures	175
5.1	Natural Vibrations of a Tether Pendulum	175
5.1.1	Dynamic Equation of a Tether Pendulum	176
5.1.2	Analysis of Natural Vibrations	178
5.1.3	Comparison Between Continuous Model and Discrete Models	185

5.1.4	Concluding Remarks	188
5.2	Duality Analysis of Rods in Natural Vibrations	189
5.2.1	A Dual of Different Cross-Sections	190
5.2.2	A Dual of Identical Cross-Sections	195
5.2.3	A Dual of Two Uniform Rods	199
5.2.4	A Dual of Two Rods with Axially Varying Material Properties	201
5.2.5	Concluding Remarks	204
5.3	Duality Analysis of Beams in Natural Vibrations	204
5.3.1	A Dual of Different Cross-Sections	206
5.3.2	A Dual of Identical Cross-Sections	213
5.3.3	A Dual of Two Uniform Beams	220
5.3.4	Concluding Remarks	223
5.4	Further Reading and Thinking	225
6	Natural Vibrations of Symmetric Structures	227
6.1	Natural Vibrations of Mirror-Symmetric Structures	228
6.1.1	Decoupling of Mirror-Symmetric Structures	228
6.1.2	Free Vibrations of Thin Rectangular Plates	237
6.1.3	Repeated Natural Frequencies of a Thin Rectangular Plate	242
6.1.4	Close Natural Frequencies of a Thin Rectangular Plate	252
6.1.5	Concluding Remarks	261
6.2	Vibration Computations of Cyclosymmetric Structures	261
6.2.1	Decoupling a Cyclosymmetric Structure Without a Central Axis	264
6.2.2	Decoupling a Cyclosymmetric Structure with a Central Axis	280
6.2.3	High-Efficient Computation Based on Modal Reduction	289
6.2.4	Concluding Remarks	297
6.3	Modal Properties of Cyclosymmetric Structures	297
6.3.1	Modal Properties in Representative Subspaces of Cyclic Group	298
6.3.2	Modal Properties in Physical Space	301
6.3.3	Central Displacements in Mode Shapes	307
6.3.4	Orthogonality of Mode Shapes with Repeated Frequencies	314
6.3.5	Modal Test of a Bladed Disc Model	318
6.3.6	Concluding Remarks	321
6.4	Further Reading and Thinking	322

7	Waves and Vibrations of One-Dimensional Structures	325
7.1	Non-dispersive Waves of Rods	326
7.1.1	Wave Analysis of an Infinitely Long Rod	326
7.1.2	Complex Function Analysis of Waves of an Infinitely Long Rod	332
7.1.3	Harmonic Wave Analysis of a Finitely Long Rod	336
7.1.4	Harmonic Vibration Analysis of a Finitely Long Rod	342
7.1.5	Concluding Remarks	348
7.2	Dispersive Waves of Rods	348
7.2.1	Dispersive Waves in a Rod Due to Non-uniform Cross-Section	350
7.2.2	Dispersive Waves of a Rod Due to Transverse Inertia	361
7.2.3	Dispersive Waves of a Rod Due to an Elastic Boundary	366
7.2.4	Concluding Remarks	370
7.3	Waves in a Rod Impacting a Rigid Wall	370
7.3.1	Wave Analysis of an Impacting Uniform Rod	371
7.3.2	Modal Analysis of an Impacting Uniform Rod	378
7.3.3	Influence of Non-uniform Cross-Section	385
7.3.4	Influence of Transverse Inertia	393
7.3.5	Criteria of Modal Truncation	398
7.3.6	Concluding Remarks	401
7.4	Free Waves and Vibrations of Beams	402
7.4.1	Free Waves of an Euler–Bernoulli Beam	403
7.4.2	Free Waves of a Timoshenko Beam	409
7.4.3	Natural Vibrations of a Timoshenko Beam	418
7.4.4	Concluding Remarks	425
7.5	Forced Waves and Vibrations of Beams	426
7.5.1	Waves of an Infinitely Long Beam to a Transverse Harmonic Force	426
7.5.2	Vibrations of a Finitely Long Beam to a Transverse Harmonic Force	431
7.5.3	Impact Response of a Clamped-Free Beam	434
7.5.4	Concluding Remarks	443
7.6	Further Reading and Thinking	444
	Appendix: Three-Dimensional Waves in an Elastic Medium	447
	Bibliography	491
	Index	495
