

Table of Contents

Chapter 1	Background and Challenges	1
Chapter 2	Introduction to Oil Sands Industry	3
2.1	An overview of bitumen extraction	3
2.2	An introduction to clay minerals	9
2.3	Kaolinite	19
2.4	Ion distribution at a solid-liquid interface	22
Chapter 3	Using AFM to Study the Stern Potentials of Platy Clay Particles	25
3.1	Preparation of clay suspension	25
3.2	Selected exposure of clay surfaces	26
3.3	Atomic force microscopy	28
3.4	Theoretical model	30
Chapter 4	Determination of Stern Potentials of Kaolinite Surfaces: Effect of Divalent Cations and Solution pH	35
4.1	Role of divalent cations	35
4.2	Determination of Stern potentials of kaolinite surfaces	35
4.3	Speculation of mechanisms of divalent cations adsorbing on kaolinite surfaces	51
Chapter 5	Imaging of Ion Adsorptions on Kaolinite Basal Planes	55
5.1	Atomic resolution imaging by AFM	55
5.2	Ion adsorption of monovalent ions	55
5.3	Ion adsorption of divalent ions	57
5.4	Mechanisms of divalent cations adsorbing on kaolinite surfaces	59
Chapter 6	Understanding Rheology and Aggregation Structure of Kaolinite Suspension	60
6.1	Understanding rheology behavior of kaolinite suspension	60
6.2	Understanding aggregation structure of kaolinite suspension	64

Chapter 7 Future Work	65
Appendices	66
Appendix A Atomic resolution image processing	66
Appendix B Error analysis of the obtained Stern potentials	67
Appendix C Speciation diagram	68
Appendix D Kaolinite aggregate structures at pH 5	68
Bibliography	70
