Authors Biographies	xi
Preface	xiii
About the Book	xv

1. Reliability Theory

1.1 Reliability Theory	1
1.2 Discrete Life Distributions	3
1.3 Mixture Distributions	6
1.4 Weighted Distributions	8
1.5 Convolution	15
1.6 Shock Models	18
1.7 Convexity and Related Concepts	21
1.8 Multivariate Distributions	22
1.9 Multivariate Weighted Distributions	28
1.10 Dependence Measures and Concepts	32
1.10.1 Measures of Dependence	32
1.10.2 Dependence Concepts	34
1.10.3 Multivariate Dependence	37
1.10.4 Time-Dependent Measures	39
1.11 Schur Convexity and Concavity	41

2. Basic Reliability Concepts

2.1 Introduction	43
2.2 Hazard Rate Function	43
2.3 Mean Residual Life	49
2.3.1 Modelling Data	58
2.4 Variance Residual Life Function	62
2.5 Upper Partial Moments	66
2.6 Reversed Hazard Rate	69
2.7 Reversed Mean Residual Life	74
2.8 Reversed Variance Residual Life	78
2.9 Odds Function	85
2.10 Log-odds Functions and Rates	89

7.5	Bayesian Approach to Ageing Classes	362
7.6	Multivariate Increasing Hazard Rate Average	365
7.7	New Better Than Used in Hazard Rate	368
7.8	Multivariate Decreasing Mean Residual Life	371
7.9	Decreasing Conditional Mean Residual Life	376
7.10	Bayesian Definition of DMRL Distributions	377
7.11	Multivariate New Better Than Used Class	378
7.12	Multivariate New Better Than Used in Expectation	379
7.13	Multivariate Harmonic New Better Than Used in Expectation	381
7.14	Increasing Product Moment Residual Life	383
8.	Multivariate Lifetime Models	
8.1	Introduction	387
8.2	Multivariate Geometric Distributions	388
8.2.1	Geometric Distribution-1	388
8.2.2	Multivariate Geometric Distribution-2	394
8.2.3	Multivariate Geometric Distribution-3	401
8.2.4	Multivariate Geometric Distribution-4	403
8.2.5	Bivariate Geometric Distribution-6	405
8.2.6	Bivariate Geometric Distribution-7	406
8.3	Schur-Constant Family	407
8.3.1	Distributional Features	409
8.3.2	Reliability Aspects	411
8.3.3	Dependence and Ageing	413
8.4	Bivariate Waring Distribution-1	416
8.5	Bivariate Waring Distribution-2	420
8.6	Bivariate Negative Hypergeometric Distribution	423
8.7	Bivariate Weibull Distribution	425
8.8	Multivariate Zipf Distributions	426
9.	Applications	
9.1	Introduction	429
9.2	Survival Analysis	429
9.2.1	Proportional Hazards Models	430
9.2.2	Additive Hazards Model	432
9.2.3	Proportional Reversed Hazards Model	436
9.2.4	Proportional Mean Residual Life Model	438
9.2.5	Proportional Odds Model	440
9.3	Social Sciences	443
9.4	Risk Analysis	450
9.5	Information Theory	452
9.6	Mathematics and Statistics	456
	References	461
	Index	481
