| Preface | ix |
| 1. Introduction | 1 |
| 1.1 Structural analysis: the main concept | 2 |
| 1.2 Stress and strain measurements in a deformable body | 16 |
| 1.2.1 Kinematics of a deformable body: strain analysis | 17 |
| 1.2.2 Equilibrium considerations and stress analysis | 24 |
| 1.3 Constitutive modeling for solid deformable bodies | 28 |
| 1.4 Finite element modeling | 33 |
| 1.5 Some comments regarding large deformation problems | 41 |
| References | 42 |
| 2. Calibration of constitutive models | 43 |
| 2.1 Mechanical characterization of materials—some standard procedures | 45 |
| 2.2 Inverse analysis for parameter quantification problems | 50 |
| 2.3 Summary | 52 |
| References | 53 |
| 3. Inverse analysis | 55 |
| 3.1 Introduction | 55 |
| 3.2 Illustrative example 1—simple structure formed by springs and a rigid bar | 58 |
| 3.2.1 Outline of the structure | 58 |
| 3.2.2 Identification of one spring stiffness | 59 |
| 3.2.3 Identification of two spring stiffnesses | 64 |
| 3.3 Illustrative example 2—simple truss system | 70 |
| 3.3.1 Outline of the structure | 70 |
| 3.3.2 Overview of the identification procedure | 70 |
| 3.3.3 Case study 1: identification of one elastic modulus | 75 |
| 3.3.4 Case study 2: identification of two elastic moduli | 75 |
| 3.4 Brief overview of optimization strategies | 77 |

| | |
|---|------------|
| 3.5 Summary | 80 |
| References | 81 |
| 4. Elastic constitutive models | 83 |
| 4.1 Fully symmetric elastic behavior— <i>isotropic materials</i> | 83 |
| 4.2 Orthotropic elastic materials | 89 |
| 4.3 Anisotropy | 93 |
| 4.4 Large elastic deformation— <i>generalization of the concept</i> | 94 |
| 4.5 Thermoelastic constitutive equations | 99 |
| 4.6 Summary | 104 |
| References | 105 |
| 5. Constitutive models for inelastic deformation | 107 |
| 5.1 Visco-elastic models | 108 |
| 5.1.1 Linear visco-elastic models | 109 |
| 5.2 Elasto-plastic constitutive models | 118 |
| 5.2.1 Continuum plasticity: <i>formulation of one-dimensional constitutive model</i> | 120 |
| 5.2.2 Continuum plasticity for the general three-dimensional state of stress: <i>elastic constants and yield conditions</i> | 130 |
| 5.2.3 Flow rule for continuum plasticity | 137 |
| 5.2.4 Introducing hardening for a three-dimensional state of stress | 144 |
| 5.3 Constitutive models for inelastic deformation due to material damage | 148 |
| 5.3.1 Isotropic damage model for a general three-dimensional stress state | 160 |
| 5.3.2 Anisotropic damage models for a general three-dimensional stress state | 164 |
| 5.4 Coupled damage plasticity models | 166 |
| 5.5 Modeling crack initiation and propagation | 169 |
| 5.6 Summary | 177 |
| References | 178 |
| 6. Numerical implementation of constitutive models with large deformation | 181 |
| 6.1 Geometrically nonlinear problems | 182 |
| 6.2 Strain and stress measures for the total Lagrangian description | 184 |
| 6.3 Tangent stiffness matrix for geometrically nonlinear problems: <i>a simple one-dimensional example</i> | 193 |
| 6.4 Tangent stiffness matrix for a two-dimensional displacement-based finite element | 198 |
| 6.5 Numerical example: total Lagrangian iterative procedure with one finite element | 201 |

| | | |
|-------|---|-----|
| 6.5.1 | The influence of the elastic constants on the solution | 208 |
| 6.6 | Hyperelastic models | 213 |
| 6.6.1 | Calculating stresses and the tangent stiffness matrix for hyperelastic models | 217 |
| 6.6.2 | Incompressibility and mesh locking | 221 |
| 6.6.3 | Reduced and selective reduced integration | 224 |
| 6.6.4 | Strain energy density function separating the volumetric and deviatoric terms | 231 |
| 6.7 | Summary | 235 |
| | References | 236 |
| 7. | Metals | 239 |
| 7.1 | The standard elasto-plastic modular matrix for the von Mises plasticity model | 243 |
| 7.2 | Stress return algorithm | 245 |
| 7.2.1 | Backward-Euler return algorithm | 246 |
| 7.3 | Numerical implementation of the von Mises plasticity without hardening | 252 |
| 7.4 | Mechanical characterization of metals | 266 |
| 7.4.1 | Elasto-plastic material calibration based on an indentation test | 267 |
| 7.5 | Summary | 275 |
| | References | 276 |
| 8. | Polymers | 277 |
| 8.1 | Visco-elastic response and model calibration | 279 |
| 8.2 | Modeling and mechanical characterization of elastomers | 286 |
| 8.3 | Summary | 292 |
| | References | 292 |
| 9. | Shape memory alloys | 293 |
| 9.1 | Introduction | 293 |
| 9.2 | Shape memory effect | 294 |
| 9.3 | Superelasticity | 296 |
| 9.4 | Material modeling | 298 |
| 9.5 | Characterization of material properties | 304 |
| 9.6 | Summary | 310 |
| | References | 313 |
| | Index | 315 |
