Preface.....	xi
Author	xv

Chapter 1	Introduction to Stress Analysis of Solids and Structures	1
	Summary	1
1.1	Introduction – A Brief Summary of Key Historical Developments	2
1.2	Role of Analysis/Simulation in Product Engineering	3
1.3	Static Equilibrium of Structures and Analysis of Forces – Statically Determinate and Indeterminate Systems	5
1.4	Stiffness (Displacement) Method of Structural Analysis	7
1.5	Components of Stresses in a 3D Body	11
1.6	Variation of Stresses and Differential Equations of Equilibrium	13
1.7	Stress Boundary Conditions	15
1.8	Practice Problems on Stress Field Visualization with CAE Tools	16

Chapter 2	Strain–Displacement Relationship and Elasticity of Materials	19
	Summary	19
2.1	Measurement of Deformation Intensity (Strain)	20
2.2	General Description of Deformation State in 3D Solids	22
2.3	Compatibility of Strain (Deformation Field) in a Body	23
2.4	Stress-Strain Relationships (Hooke’s Law)	23
2.5	Solution of Elasticity Problems Using Stress Distribution Functions	28
2.6	Solution of Elasticity Problems Using Displacement Variation Functions	30
2.7	Stiffness Method (Finite Element Method) of Structural Analysis	32
2.8	Stiffness Properties of 1-D Truss Element Providing Resistance to Axial Deformation Only	34
2.9	Higher Order Truss Element and Model Refinement	39
2.10	Model Preparation for Computer-Aided Analysis of Structures with Finite Element Simulation Software	41
2.11	Practice Problems – Stress Analysis of a Cable with Finite Element Analysis Software ABAQUS	43

Chapter 3	Analysis of Solids Represented by 2D Stress Fields.....	47
	Summary	47
3.1	Plane Strain – A Special Form of Elasticity Problem.....	48
3.2	Plane Stress – A Special Form of Elasticity Problem.....	50
3.3	Stress Functions for 2D Plane Strain and Plane Stress Elasticity Problems	51
3.4	Example Use of Stress Function Approach to Solve Elasticity Problems	54
3.5	Stiffness Method Analysis of Solids Represented by 2D Stress-Deformation Fields	60
3.6	Iso-Parametric Definition of 2D Solid Finite Elements	63
3.7	Numerical Calculation of Stiffness Matrix for Iso-Parametric 2D Solid Finite Elements	67
3.8	Higher Order Plane-Stress/Plane-Strain Elements	71
3.9	Constant Stress/Strain Triangular Element.....	73
3.10	Convergence of Finite Element Model Solutions.....	76
3.11	Selection of Element Types for 2D Stress Analysis with FEA Software Packages	78
3.12	Description of Load Types in General Stress Analysis Problems	82
3.13	Refined Finite Element Model Preparation with a Pre-Processor (HyperMesh)	83
3.14	Practice Problems – Stress Analysis of a Plate Subjected to In-Plane Stresses.....	84
 Chapter 4	 FEA Model Preparation and Quality Checks.....	 85
	Summary	85
4.1	Adaptation of Finite Element Mesh to Stress Field Variations.....	85
4.2	Element Type Selection for a Given Stress Analysis Problem.....	88
4.3	Initial Geometric Design of Structural Components	91
4.4	FEA Model Preparation for Case-Study: Plate with Hole (by Using HyperMesh)	92
4.4.1	CAD Data Preparation for FEA Modeling	92
4.4.2	Finite Element Meshing of the CAD Geometry	94
4.4.3	Finite Element Mesh Quality Checks	95
4.4.4	Material and Part Property Assignment.....	98
4.4.5	Analysis Parameters – Boundary Constraints, External Loads and Model Outputs	99
4.4.6	Definition of ABAQUS Analysis Step	101
4.4.7	Exporting the Model Input File for ABAQUS Analysis	101

4.5	Post-Processing of FEA Results	103
4.6	Practice Problems – Stress Analysis of Plate with Hole.....	103
Chapter 5	Stress Analysis of Axisymmetric and General 3D Solids	107
	Summary	107
5.1	Axisymmetric – A Special Form of 3D Elasticity Problems.....	107
5.1.1	Equations of Equilibrium in Polar Coordinates.....	109
5.1.2	Strain–Displacement Relationships	109
5.1.3	Stress–Strain Relationships	110
5.1.4	Compatibility Condition	111
5.2	Stress Analysis of Axisymmetric Example – Thick Wall Cylinder.....	111
5.3	Finite Element Analysis of Axisymmetric Problems.....	115
5.4	Stress Analysis of Three-dimensional Bodies – Concentrated Loads	117
5.4.1	Stresses in a Semi-Infinite Solid Subjected to Concentrated Normal Force on the Boundary	117
5.4.2	Stresses in a Solid Beam Subject to Concentrated Lateral Forces	119
5.5	Finite Elements for Stress Analysis of General 3D Solids	121
5.6	Three-Dimensional FEA Model Preparation and Element Quality Checks	123
5.7	Practice Problems – Stress Analysis of Axisymmetric and 3D Solids	124
Chapter 6	Deformation Analysis of Beams for Axial, Bending, Shear, and Torsional Loads	127
	Summary	127
6.1	Bending Stresses in a Beam	128
6.2	Stresses Due to Transverse Shear	129
6.3	Transverse Normal Stress in a Beam.....	132
6.4	Torsional Response of a Beam	133
6.5	Beam Response to Combined Load Effects	142
6.6	Elastic Bending Deflection of Beams.....	144
6.7	Stress Analysis of Curved Beams.....	146
6.8	Stiffness Properties of Prismatic Euler–Bernoulli Beam Elements	148
6.9	Stiffness Properties of Beams Including Shear Deformation.....	154
6.10	Analysis of Beams and Frames with FEA Software Packages	158
6.11	Practice Problems: Load–Deflection Analysis of Beams	162

Chapter 7	Analysis of 3D Thin-Wall Structures (Plates and Shells)	165
	Summary	165
7.1	Bending Stresses and Strains in a Plate	166
7.2	Analytical Solutions for Plate Bending Deflections	169
7.3	In-plane Membrane Stress Resistance of a Shell	172
7.4	Bending Stiffness of Flat Plate Element	174
7.5	Flat Shell Element as a Combination of Plate Bending and Membrane Elements	176
7.6	Shear Deformation in Plates	179
7.7	Curved Shell Elements	181
7.8	Shell Element Mesh Quality and Integration Rules	184
7.9	Analysis of Shells with FEA Software	186
7.10	Practice Problems: Load-Deflection Analysis of Shells	187
Chapter 8	Multi-Component Model Assembly	191
	Summary	191
8.1	Element Compatibility and Convergence of Simulation Results	191
8.2	Modeling of Kinematic Joints in Structural Assemblies	194
8.3	Deformable Joint Elements for Part-to-Part Connections	198
8.4	Mesh-Independent Fasteners for Part-to-Part Connections	201
8.5	Simulation of Part-to-Part Interface Contacts	203
8.6	Thin-Layer Interface Elements	207
8.7	Modular Organization of Data in Multi-component Model Assembly	209
8.8	Result Quality Checks	211
8.9	Practice Problems: Analysis with Multi-Component Model Assemblies	213
Chapter 9	Interpretation of Stress Analysis Results for Strength and Durability Assessment	217
	Summary	217
9.1	Engineering Properties of Materials	218
9.2	Stress-Strain Results from Linear Elastic Finite Element Analysis of Solids	219
9.3	Strength Assessment of Solids – Use of Material Failure Theories	222
9.4	Post-Processing of Finite Element Stress Analysis Results	229
9.5	Stress Analysis for Durability (Fatigue Life) Assessment of Structures	230

9.6	Structural Safety Assessment and Quality of FEA Stress Results	234
9.7	Stresses at Points of Discontinuity: Stress Intensity Factor	235
9.8	Practice Problems: Assessment of Structural Strength and Durability	238

Chapter 10	Vibration Frequency Analysis of Structures with FEA Model	241
	Summary	241
10.1	Introduction – Dynamic Response of Structures	242
10.2	Vibration Frequency of a Single Degree of Freedom Spring-Mass System	243
10.3	Forced Vibration Response and Resonance of Structures	245
10.4	Frequency Separation and Design Targets for Structures	249
10.5	Vibration Mode Shape and Frequency of SDOF Structures	250
10.6	Vibration Frequencies of MDOF Systems	253
10.7	Calculation of System Mass Matrix for MDOF Systems	255
10.8	Numerical Calculation of Vibration Mode Shapes and Frequencies of MDOF Systems	259
10.9	Vibration Frequency Analysis with ABAQUS	261
10.10	Practice Problems: Vibration Analysis of Structures	262

Chapter 11	Linear Dynamic Response Analysis of Structures	265
	Summary	265
11.1	Linear Elastic Response of SDOF Systems to Impulsive Loading	265
11.2	Response Spectrum of Linear Dynamic Systems	268
11.3	Time-Domain Analysis of Dynamic Structural Response	270
11.4	Numerical Integration Parameters for Time-Domain Analysis of Structures	271
11.5	Time Domain Analysis of MDOF Systems	273
11.6	Mode Superposition Method for Analysis of MDOF Systems	276
11.7	Explicit Time-Domain Analysis of MDOF Systems	277
11.8	Linear Dynamic Response Analysis with ABAQUS	282
11.9	Practice Problems: Dynamic Response Analysis of Structures	286

Chapter 12	Nonlinear Analysis of Structures.....	289
	Summary	289
12.1	Simulation of Nonlinear Force-Deformation Response of Structures.....	290
12.2	Nonlinear Material Models for Finite Element Simulation of Structures	294
12.3	Simulation of Large Deformation Response – Nonlinear Geometric Problems	301
12.4	Nonlinearity Arising from Changes to Inter-Body Contacts	307
12.5	Nonlinear Dynamic Response Analysis of Structures.....	308
12.6	Material Failure Simulation in Nonlinear Finite Element Analysis.....	310
12.7	Computational Methods for Structural Form Simulation.....	311
12.8	Practice Problems: Nonlinear Response Analysis of Structures	313
	References.....	315
	Index.....	319
