
Contents

Chapter 1	Basics of holography	1
1.1	Scalar wave	1
1.1.1	Light intensity and interference	4
1.1.2	Plane wave and spherical wave	5
1.2	Holography	6
1.2.1	Inline hologram and off-axis hologram	8
1.2.2	Types of hologram	11
Chapter 2	Numerical diffraction calculation	15
2.1	Sommerfeld diffraction integral	15
2.2	Angular spectrum method (planar wave decomposition)	16
2.2.1	Interpretation of angular spectrum	18
2.3	Fresnel diffraction	19
2.3.1	Fresnel diffraction: convolution form	20
2.3.2	Fresnel diffraction: Fourier transform form	21
2.4	Fraunhofer diffraction	22
2.5	Operator of diffraction	22
2.6	Numerical diffraction calculation	23
2.6.1	Discretization	23
2.6.2	Implementation of Fresnel diffraction using FFT	26
2.6.3	Examples of use of diffraction calculation	35
2.6.4	Aliasing in diffraction calculation	38
2.7	Apodization of ringing artifacts	41
2.8	Special diffraction calculations	43
2.8.1	Shift diffraction and scale diffraction	43
2.8.2	Double-step Fresnel diffraction	49
Chapter 3	Hologram calculation	53
3.1	Overview of holographic display	53
3.1.1	Viewing angle and viewing area	53
3.1.2	Holographic display systems that enlarge the viewing angle and field of view	56
3.1.3	Problems for computational cost	58
3.2	Point cloud method	60
3.2.1	Look-up table algorithms	61
3.2.2	Recurrence algorithm	63

3.2.3	Image hologram algorithm and wavefront recording plane method	66
3.2.4	Wavelet transform-based algorithm	67
3.3	Polygon approach	73
3.3.1	Multi-view image approach	80
3.3.2	RGB-D image approach	85
3.3.3	Acceleration of color hologram calculation	87
3.3.4	Other algorithms	87
3.3.5	Summary	89
Chapter 4	Digital holography	91
4.1	Digital holography	91
4.2	Problems of digital holography	95
4.3	Inline digital holography	99
4.4	Off-axis digital holography	100
4.5	Gabor digital holography	103
4.5.1	Gabor color digital holographic microscopy ...	106
4.5.2	Gigapixel digital holographic microscopy	107
4.6	Phase-shifting digital holography	108
4.6.1	3-step phase-shifting digital holography	110
4.6.2	2-step phase-shifting digital holography	111
4.6.3	1-step phase-shifting digital holography	113
4.7	Autofocusing algorithm	116
Chapter 5	Applications of computer holography	119
5.1	Phase retrieval algorithm	119
5.1.1	Gerchberg-Saxton algorithm	119
5.1.2	Phase retrieval algorithm using multiple diffraction patterns	124
5.2	Holographic memory	125
5.2.1	Volume hologram	128
5.2.2	Representation of a volume hologram by wavevector	131
5.2.3	Angular multiplex recording method	132
5.3	Holographic projection	135
5.3.1	Outline of holographic projection	136
5.3.2	Lensless zoomable holographic projector	139
5.3.3	Speckle suppression	140
5.3.4	Random phase-free method	142
5.4	Applications of deep learning to computer holography	148
5.4.1	Autoencoder-based holographic image restoration	148

5.4.2	Deep-learning-based classification for holographic memory	155
5.4.3	Convolutional neural network-based regression for depth prediction in digital holography	162
Chapter 6	Hardware implementation.....	167
6.1	Field-programmable gate arrays in computer holography	167
6.1.1	Fixed-point operation	170
6.1.2	HDL implementation	175
6.1.3	Parallel implementation.....	181
6.1.4	Diffraction calculation on FPGA.....	184
6.2	GPU in computer holography	185
6.2.1	Diffraction calculation using GPU.....	189
6.3	Computational wave optics library	193
6.4	Other hardware in computer holography	196
6.5	Pros and cons.....	196
Chapter 7	Appendix	199
7.1	Definition of Fourier transform	199
7.2	Shift theorem	199
7.3	Convolution theorem.....	200
References.....		201
Index.....		213
