

CONTENTS

Preface		vii
Chapter 1	Exciton States Spectroscopy in Quasi-Zero-Dimensional Nanostructures: Theory	1
Chapter 2	Theory of Excitons and Quasimolecules Formed from Spatially Separated Electrons and Holes in Quasi-Zero-Dimensional Nanosystems	21
Chapter 3	Magneto-Optics Nanoheterosystems: Local Electron States in Ellipsoidal Nanosystems in Magnetic Field: Theory	45
Chapter 4	Optical Nonlinearity of Dielectric Nanoheterostructures	59
Chapter 5	Photonics of Dielectric Nanoheterostructures	101
Chapter 6	New Quasiatomic Nanoheterostructures: Superatoms and Quasimolecules: Theory	137
Chapter 7	Quasiatomic Nanoheterostructures: New Model Superatoms (Or Artificial Atom): Theory	151
Chapter 8	Optical Absorption in the One-Particle Quantum-Confinement States of Charge Carriers in Semiconductor Quantum Dots: Theory	159
Index		171
