Preface	xiii
1 Introduction	1
1.1 Overview of Vibroacoustic Modal Analysis	1
1.2 Background	3
1.3 References	4
2 Classical Modal Analysis with Random Excitations	7
2.1 Introduction	7
2.2 Structural System	7
2.2.1 Lagrange Method	7
2.2.2 Classical Modal Analysis	9
2.2.3 Random Excitation Response	12
2.3 Acoustic Cavity System	13
2.3.1 Classical Modal Analysis	14
2.3.2 Random Excitation by Sound Sources	16
2.3.3 Random Excitation by Wall Panels	17
2.4 Coupled Structural-Acoustic System	18
2.4.1 Classical Modal Analysis	19
2.4.2 Random Excitation Response	20
2.5 Summary	21
2.6 References	22
3 Asymptotic Modal Analysis of Structural Systems	25
3.1 Introduction	25
3.2 Classical Modal Analysis	25
3.3 Asymptotic Modal Analysis	27
3.3.1 AMA Approximations	28
3.3.2 Frequency Band Response	30

3.3.3	Asymptotic Limit of Classical Modal Analysis	31
3.4	AMA Applications	32
3.5	Summary	36
3.6	References	37
4	Asymptotic Modal Analysis of Acoustic Cavity Systems	39
4.1	Introduction	39
4.2	Classical Modal Analysis	39
4.3	Asymptotic Modal Analysis	41
4.3.1	Sound Source Excitation	42
4.3.2	Wall Panel Excitation	44
4.4	AMA Applications	48
4.4.1	Rectangular Enclosure	48
4.4.2	Rectangular Cavity-Plate System	51
4.5	Summary	53
4.6	References	53
5	Asymptotic Modal Analysis of Coupled Systems	55
5.1	Introduction	55
5.2	Classical Modal Analysis	55
5.2.1	Lagrange Multiplier Method	56
5.2.2	Equations-of-Motion	57
5.2.3	Frequency Response Functions	58
5.2.4	Coupled Natural Frequencies and Damping	59
5.2.5	Random Excitation and Mean-Square Response	60
5.3	Discrete Classical Modal Analysis	60
5.3.1	Reduced-Order Model	61
5.3.2	Random Excitation and Mean-Square Response	62
5.4	Asymptotic Modal Analysis	64
5.4.1	Modal Averaging	64
5.4.2	Frequency Reduction and Frequency Band Response	66
5.5	Applications	69
5.5.1	Displacement Distribution	69

5.5.2	Frequency Band Response	69
5.6	Summary	72
5.7	References	72
6	Asymptotic Modal Analysis of Nonlinear Systems	75
6.1	Introduction	75
6.2	Classical Modal Analysis Formulation	75
6.3	CMA Transient Solution Method	77
6.3.1	Eigenvalue Analysis and Coupled Natural Frequencies	79
6.3.2	Time Marching Method	82
6.4	CMA Frequency Response Method	82
6.5	Dominance-Reduced CMA Method	84
6.6	Asymptotic Modal Analysis Method	87
6.7	Results and Discussion	89
6.7.1	Nonlinear Response Solution	89
6.7.2	Method Comparisons	90
6.7.3	Runtime Comparison	91
6.8	Summary	93
6.9	References	94
7	Summary	97
7.1	State of the Art in Predicting the Response of Systems with High Modal Density	97
7.2	Two-Component System Example	98
7.2.1	System Natural Modes and Frequencies	99
7.2.2	Forced System Response	101
7.3	Future Developments in AMA	103
7.4	References	105
	Authors' Biographies	107
	Index	109
