

Contents

1 Introduction	1
1.1 Basic Concepts of Reliability Theory	1
1.2 Main Indicators of Reliability	4
1.2.1 Failure-Free Indicators	5
1.2.2 Durability Indicators	5
1.2.3 Indicators of Maintainability and Preservation	6
1.2.4 Complex Indicators	6
1.3 Base Dependencies of the Reliability Theory	6
1.4 Reliability During Regular Operation	9
1.5 Reliability During Gradual Failures	12
1.5.1 The Normal Distribution	12
1.5.2 The Truncated Normal Distribution	16
1.5.3 In a Log-Normal Distribution	17
1.5.4 The Weibull Distribution	19
1.6 Combined Action of Sudden and Gradual Failures	22
1.7 Features of the Reliability of Recoverable Products	23
1.8 Questions	24
References	25
2 Mathematical Basis of Reliability	27
2.1 Introduction	27
2.2 Random Events and Probabilities	27
2.3 Numerical Features and Distributions of Random Variables	30
2.3.1 Mathematical Expectation	30
2.3.2 Dispersion	31
2.3.3 Average Square-Law Deviation	32
2.3.4 Moments of Distribution	32
2.3.5 Asymmetry	33
2.3.6 Excess	34
2.3.7 Mode of Discrete Random Variable	34
2.3.8 Median of Random Variable	35

2.4	Distribution Functions of Random Variables	35
2.4.1	Distribution Functions for Discrete Random Variables	35
2.4.2	Distribution Functions for Continuous Random Variables	37
2.5	Questions	41
	References	42
3	System Reliability Models	43
3.1	Introduction	43
3.2	Non-repair System Reliability Analysis	44
3.2.1	Classification of System Reliability Function	44
3.2.2	Analysis of the Reliability Function	45
3.2.3	Redundancy System Reliability	49
3.2.4	Methods of the Reliability Function	53
3.3	Repair System Reliability Analysis	57
3.3.1	General Information	57
3.3.2	System Reliability Function	63
3.3.3	Non-parametric Analysis Methods	75
3.3.4	Parametric Analysis Methods	85
3.3.5	Markov Chain and Its Application	100
3.4	Questions	122
	References	123
4	Complex System Reliability Analysis Methods	125
4.1	Introduction	125
4.2	Failure Mode and Effect Critical Analysis	126
4.2.1	Basic Concepts	126
4.2.2	Types of FMECA	127
4.2.3	Steps for FMECA	128
4.2.4	Criticality Assessment	131
4.2.5	FMECA Application	135
4.3	Fault Tree Analysis	139
4.3.1	Basic Concepts	140
4.3.2	Basic Approach	142
4.3.3	Qualitative Analysis	145
4.3.4	Quantitative Analysis	147
4.3.5	Reliability Graph	156
4.3.6	FTA Application	157
4.4	Comparison FMECA and FTA	159
4.5	Questions	160
	References	161

5	Model-Based Reliability Analysis Methods	163
5.1	Introduction	163
5.2	Multi-Source Reliability Data Processing System for Mechanical Parts	164
5.2.1	Comprehensive Reliability Assessment Model Based on Multi-Source Data	165
5.2.2	Case Study	170
5.3	Multi-Phase Mission Reliability Analysis	174
5.3.1	PMS System Characteristics	174
5.3.2	PMS Reliability Modeling Process	175
5.3.3	Static Reliability Analysis Method Based on BDD	176
5.3.4	Dynamic Reliability Analysis Method Based on Semi-Markov	182
5.3.5	Modular Analysis Method	185
5.3.6	Case Study	185
5.4	Conclusions	191
	References	192
6	System Reliability Prediction and Allocation	193
6.1	Introduction	193
6.2	Reliability Prediction	194
6.2.1	Reliability Block Diagram	194
6.2.2	Series Systems	195
6.2.3	Parallel Systems	199
6.2.4	Combined Structure	201
6.2.5	<i>k</i> -Out-of- <i>n</i> Systems	204
6.2.6	Redundant System	207
6.2.7	Reliability Evaluation of Complex Systems	212
6.2.8	Confidence Ranges for System Reliability	217
6.2.9	Component Importance	226
6.3	Reliability Allocation	232
6.3.1	Criteria for Reliability Allocation	233
6.3.2	Equal Allocation Approach	234
6.3.3	ARINC Approach	235
6.3.4	AGREE Allocation Approach	237
6.3.5	Customer-Driven Allocation Approach	240
6.3.6	Optimal Allocation Approaches	242
6.4	Questions	244
	References	245
7	Mechanical Reliability Analysis	247
7.1	Introduction	247
7.2	Basic Concepts	248
7.2.1	Types of Operational Loads	248
7.2.2	Specifics of Static Load	249
7.2.3	Specifics of Cycling Loading	251

7.2.4	Specifics of Temperature Effect	255
7.2.5	Creep and Relaxation of Stresses	259
7.3	Factors Affect Mechanical Reliability	261
7.3.1	Corrosion	261
7.3.2	Chemical Medium	263
7.3.3	Fields Environment	264
7.3.4	Space Medium	266
7.3.5	Structural Materials' Selection	267
