

Table of Contents

Preface

Table of Contents

Chapter 1 Introduction

- 1.1 Accessibility and use of open spaces / 002
- 1.2 The dilemma of the conventional concept of accessibility and the morphological complexity of Hong Kong's urban areas / 006
- 1.3 Main research problem and sub-problems / 009
- 1.4 Aims of the study / 010
- 1.5 Scope of the study / 010
- 1.6 Structure of the book / 010

Chapter 2 Literature Review

- 2.1 Different ideas of successful open spaces / 014
 - 2.1.1 Morphological studies of traditional squares / 015
 - 2.1.2 Empirical studies of contemporary open spaces / 018
 - 2.1.3 Studies on the use of open spaces in relation to urban morphology and pedestrian movement patterns / 021
- 2.2 Various definitions and measures of accessibility / 022
 - 2.2.1 Definition and measures of accessibility in regional science / 023
 - 2.2.2 The concepts and measures of accessibility in urban design / 025
- 2.3 Urban morphology and pedestrian movement modelling / 028
 - 2.3.1 Different ways of describing urban forms / 028
 - 2.3.2 Studies of urban morphology and its implications for spatial use / 031
 - 2.3.3 Space syntax: a configurational analysis / 032
- 2.4 The formulation of the accessibility model of open spaces (Sub-problem 1) / 045

Chapter 3 Methodology

- 3.1 Research design / 050
 - 3.1.1 An integrated approach to research / 050
 - 3.1.2 The selection of the case study urban area / 052

- 3.1.3 The selection of sample open spaces / 054
- 3.1.4 A multi-scale analytical framework / 056
- 3.2 Data collection and analysis methods and techniques / 057
 - 3.2.1 Morphological analysis of urban layout and configurational modelling of pedestrian movement in Wanchai District (Sub-problem 2) / 058
 - 3.2.2 Measuring and evaluating the accessibility of open spaces (Sub-problem 3) / 063
 - 3.2.3 The relationship between accessibility and use of open spaces (Sub-problem 4) / 068
- 3.3 Summary / 070

Chapter 4

Morphological Analysis of the Urban Layout in Wanchai District, Hong Kong

- 4.1 Introduction to Wanchai District of Hong Kong / 074
 - 4.1.1 General information / 074
 - 4.1.2 A brief historical review / 075
 - 4.1.3 Reclamation as an urban development / 076
- 4.2 Physical analysis of the urban layout / 078
 - 4.2.1 Analysis of the overall layout / 079
 - 4.2.2 Comparative analysis between different grids / 081
 - 4.2.3 Sub-summary / 085
- 4.3 Configurational analysis of the urban layout / 086
 - 4.3.1 Historical development of the urban configuration / 086
 - 4.3.2 Configurational analysis / 088
- 4.4 Configurational modelling of pedestrian movements: a predictability analysis / 094
 - 4.4.1 The whole urban system / 096
 - 4.4.2 Sub-areas embedded in the whole / 098
- 4.5 Summary / 104
 - 4.5.1 Configurational analysis / 104
 - 4.5.2 Predictability analysis / 105
 - 4.5.3 Implications for subsequent analysis / 106

Chapter 5

Measuring and Evaluating the Accessibility of Open Spaces in Wanchai District, Hong Kong

- 5.1 Description of the sample spaces / 108
 - 5.1.1 General information / 108
 - 5.1.2 Statistical analysis of immediate properties / 115
 - 5.1.3 Correlation analysis / 116
- 5.2 Measuring and evaluating the accessibility of open spaces / 118
 - 5.2.1 Physical accessibility at a global level / 118
 - 5.2.2 Physical accessibility at the local level / 124

- 5.2.3 Visibility of open spaces / 130
- 5.2.4 The adjacent level of pedestrian movement around the sample spaces / 138
- 5.2.5 Correlation between physical accessibility and visibility / 139
- 5.3 Summary / 140

Chapter 6 Accessibility and Use Patterns of Open Spaces

- 6.1 Brief description of the patterns of use within the sample spaces / 144
 - 6.1.1 Type A: Pocket parks / 144
 - 6.1.2 Type B: Playgrounds / 146
 - 6.1.3 Type C: Gardens / 147
- 6.2 Comparative analysis of use patterns among the sample spaces / 148
 - 6.2.1 Mean number of users of the sample spaces (Mean use) / 148
 - 6.2.2 Distribution of mean use throughout the day (Time pattern) / 150
 - 6.2.3 Mean use density of sample spaces / 152
 - 6.2.4 User profiles within the sample spaces / 154
- 6.3 The relationship between accessibility and use of open space / 156
 - 6.3.1 Use of sample spaces and their area and enclosure ratio (ERT) / 156
 - 6.3.2 Global accessibility and open space use / 158
 - 6.3.3 Accessibility at the local level and use of open spaces / 162
 - 6.3.4 Convex isovist and open space use / 177
 - 6.3.5 Adjacent levels of pedestrian movement and open space use / 182
- 6.4 Summary / 189
 - 6.4.1 Use patterns of open space in Wanchai District / 190
 - 6.4.2 Interrelationship between accessibility and open space use / 190
 - 6.4.3 The impact of adjacent levels of pedestrian movement / 191

Chapter 7 Discussion and Conclusions

- 7.1 Discussion and conclusions / 194
 - 7.1.1 An alternative model for the accessibility of open space / 195
 - 7.1.2 The relationship between urban morphology, pedestrian movement and the accessibility and use of open spaces / 198
 - 7.1.3 Conclusions / 201
- 7.2 Implications of the study / 202
 - 7.2.1 Implications for policy decision-making / 202
 - 7.2.2 Implications for further academic research / 202
 - 7.2.3 Implications for open space planning and design / 204
- 7.3 Study limitations and recommendations / 205

Appendices / 207

Bibliography / 234
