PREFACE

PREAMBLE

Chapter 1 Introduction	001
1.1 Concept of durability	001
1.2 Structure durability	001
1.3 Durability research history	004
1.4 Main contents of durability research	006
1.4.1 Research on the environment level	006
1.4.2 Research on the material level	008
1.4.3 Research on the component level	009
1.4.4 Research on the structure level	010
1.5 Direction of durability research	011
Questions	012
Chapter 2 Corrosive Environment Classification and Environmental Effect Level	013
2.1 Typical corrosive environment	013
2.1.1 General atmospheric environment	013
2.1.2 Offshore and marine environment	017
2.1.3 Cold environment	020
2.1.4 Sulfate corrosion environment	020
2.1.5 Industrial corrosive environment	021
2.2 Environmental classification and environmental effect level	023
2.2.1 Code for the design of concrete structures	023
2.2.2 Durability design standards for concrete structures	025
2.2.3 Code for corrosion protection design of industrial buildings	029
2.2.4 Code for durability design of concrete structures of highway engineering	033
2.2.5 Code for durability design of railway concrete structures	039
2.2.6 Durability design standard of water transport engineering structure	043
2.3 Durability zoning	045
2.3.1 Climate zoning of China	045
2.3.2 Durability environmental zoning	046

Questions.....	052
----------------	-----

Chapter 3 Corrosion Mechanism of Concrete Structures.....054

3.1 Composition of hardened cement concrete.....	054
3.1.1 Hardened cement paste.....	054
3.1.2 Interface transition zone.....	056
3.1.3 Pores and micro fractures.....	057
3.2 Corrosion mechanism of concrete materials.....	058
3.2.1 Carbonization.....	058
3.2.2 Acid rain erosion.....	061
3.2.3 Chloride ion erosion.....	063
3.2.4 Freeze-thaw action.....	069
3.2.5 Sulfate attack.....	071
3.2.6 Alkali aggregate reaction.....	072
3.3 Corrosion mechanism of reinforcement in concrete.....	074
Questions.....	075

Chapter 4 Durability Test and Test Method of Concrete Structure.....076

4.1 Environmental investigations.....	076
4.1.1 Meteorological environment investigation.....	076
4.1.2 Work environment investigation.....	076
4.2 Durability testing and test methods for structural concrete.....	078
4.2.1 Test for concrete strength.....	078
4.2.2 Measurement for concrete cover thickness.....	081
4.2.3 Measurement for concrete carbonation depth.....	083
4.2.4 Test for concrete permeability.....	085
4.2.5 Determination for chloride ion content in concrete.....	093
4.2.6 Determination of sulfate content in concrete.....	094
4.2.7 Test for concrete carbonization.....	095
4.2.8 Test for resistance of concrete to freezing.....	096
4.2.9 Test for resistance of concrete to sulfate attack.....	101
4.2.10 Test for an alkali-aggregate reaction.....	103
4.2.11 Test for chloride ion penetration of fiber reinforced concrete.....	105
4.3 Measurement and test method for structural steel bar corrosion.....	107
4.3.1 Half-cell potential method.....	107
4.3.2 Concrete resistivity method.....	110
4.3.3 Linear polarization resistance method.....	112
4.3.4 AC impedance spectroscopy.....	115
4.3.5 Comparison of common electrochemical measurement methods.....	116

4.3.6	Corrosion test of steel bar	117
4.4	Project instances	118
4.4.1	Concrete structure of an industrial building	118
4.4.2	Prestressed concrete hollow slab of the old bridge	121
	Questions	125
Chapter 5	Durability Assessment of Existing Concrete Structures.....	127
5.1	Reliability appraisal of civil buildings	127
5.2	Reliability appraisal of industrial buildings	137
5.2.1	Basic rules	138
5.2.2	Inspection, analysis, and check	140
5.2.3	Rating the serviceability of member	143
5.2.4	Rating the serviceability of structural systems	145
5.2.5	Appraisal rating of industrial buildings and structures	149
5.3	Durability assessment of concrete structure	152
5.3.1	Durability appraisal criteria and investigation of service conditions	153
5.3.2	Durability assessment of steel bar corrosion in the atmosphere	155
5.3.3	Evaluation of durability of steel bar in chloride corrosive environment	157
5.3.4	Durability assessment of members, set of members, and structures	159
5.4	Technical condition and durability test and evaluation of highway girder bridge	160
5.4.1	Technical condition evaluation of highway girder bridge	160
5.4.2	Durability test and evaluation of highway bridges	169
5.5	Case study	171
5.5.1	Project Overview	171
5.5.2	Inspection of the durability of the structure	172
5.5.3	Evaluation of the service life of the structure	175
5.5.4	Conclusion	178
	Questions	179
Chapter 6	Corrosion Protection of Concrete Structures.....	180
6.1	Active corrosion protection	180
6.1.1	Cathodic protection method	181
6.1.2	Electrochemical alkalization method	183
6.1.3	Electrochemical dechlorination method	184
6.2	Passive corrosion protection	185
6.2.1	Concrete surface coating	185
6.2.2	Epoxy-coated steel bars	189
6.2.3	Steel bar rust inhibitor	193
6.2.4	High-performance concrete	195

6.3	Project example	203
6.3.1	Project Overview	203
6.3.2	Epoxy-coated steel bars	208
6.3.3	Steel bar rust inhibitor	209
6.3.4	Impressed current cathodic protection	210
6.3.5	Plastic corrugated pipe and vacuum-assisted grouting	211
6.3.6	Fiber reinforced concrete and silane impregnation	213
6.3.7	Anticorrosion coating on concrete surface	214
6.3.8	High-performance marine concrete	216
6.3.9	Structure and crack control	222
	Questions	224

Chapter 7 Durability Design of Concrete Structures 226

7.1	Basic requirement for durability design	226
7.1.1	Design principle	226
7.1.2	Materials requirement	227
7.1.3	Detailing requirements	238
7.1.4	Construction curing requirements	247
7.2	Design working life	249
7.2.1	The specification evolution of the design service life	249
7.2.2	Designed service life of the engineering structure	251
7.3	Project instances	253
7.3.1	Project Profile	253
7.3.2	Idea of durability design	254
7.3.3	Durability design method	255
	Questions	258
