Materials

Chapter 1 **Project Overview** 1 1 Introduction 1 1.1.1 Overall Arrangement 3 1.1.2 Overview of Program Implementation 6 1.1.3 Interdisciplinary Efforts 8 1.2 Research Circumstances 8 1.2.1 Overall Scientific Objectives 9 1.2.2 Key Scientific Issues 13 Significant Progress Chapter 2 Research in China and Abroad 19 20 Research Status and Development Trend 2.1 Research Status and Development Trend of Optoelectronic 2.1.1 2.1 **Functional Crystals** 2.1.2 Research Status and Development Trend of Molecular 22 Ferroelectrics 2.1.3 Research Status and Development Trend of Molecular Magnetics 23 2.1.4 Research Status and Development Trend of Superconducting

24

		2.1.	5 Research Status and Development Trend of Thermoelectric Materials	26
2	2.2	Dev	velopment Trends of Functional Crystalline Materials	27
		2.2.	1 Developments in Laser Crystals and Nonlinear Optical Crystals	28
		2.2.		25
		2.2.		31
		2.2.	•	3
		2.2.	•	3.
		2.2.		3.
			Chapter 3	
			Major Research Achievements	3
2	2 1	Ctor	actural Designing and Modulation of Magnetic Functional Molec	ular
_			alline Materials	3
	3	.1.1	Ground-State Spin and Uniaxial Magnetic Anisotropy Modulation	37
			of Single-Molecule Magnets	41
		1.2	Metal-Organic Single-Ion Magnets	41
	3.	1.3	Assembly Based on High-Performance Single-Ion Magnet	43
			Substrates Output Ou	43
	3.	1.4	Nuclear Spin Strategy for Suppressing Magnetic Quantum	45
			Tunneling Effect	43
3.2	D	esigr	n, Synthesis, and Performance of High-Performance Molecular	
			electrics	46
	3.	2.1	Molecular Ferroelectrics with High Curie Temperature,	
			Large Saturation Polarization	47
	3.	2.2	Molecular Ferroelectrics with Large Piezoelectric Coefficients	49
	3.	2.3	Homochiral Molecular Ferroelectrics	51
	3.	2.4	Molecular Ferroelectrics with Semiconductor Properties	53
		2.5	New Strategies for Precise Design of Molecular Ferroelectrics	54
	3.	2.6	Photoferroelectric Semiconductor Crystalline Materials for	
			Next-Generation Photoelectric Detection Technology	56
	3.	2.7	Discovery of Molecule-Based Ferroelectric Crystalline Materials	
			with Fast Polarization Reversals	57

3.3 Laser Crystals and Nonlinear Optical Crystals 3.3.1 Research on the Structure-Property Relationships of Nonlinear Optical Crystals 3.3.2 New Deep-Ultraviolet Nonlinear Optical Crystals 3.3.3 Infrared Nonlinear Optical Crystal 3.3.4 Laser Crystals and Transparent Ceramics 3.4 New Electron-Doped Iron-Selenium-Based Superconductors 3.4.1 First Discovery of Electron-Doped Iron-Selenium-Based Superconductors 3.4.2 First Discovery of Molecular Intercalation Series of Iron-Selenium-Based High-Temperature Superconductors 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 3.4.4 First Anderson Localization in the Single-Crystal Electron System 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 3.5 Other Novel Crystalline Materials 3.5.1 Metal-Organic Framework Isoporous Materials 3.5.2 2D Crystalline Materials Chapter 4 Outlook 4.1 Strategic Needs 4.2 Conceptions and Suggestions References 11		3.2.8	Discovery of Incommensurate Structure Modulated Molecular Ferroelectric Crystals	57
3.3.1 Research on the Structure-Property Relationships of Nonlinear Optical Crystals 59 3.3.2 New Deep-Ultraviolet Nonlinear Optical Crystals 74 3.3.3 Infrared Nonlinear Optical Crystal 81 3.3.4 Laser Crystals and Transparent Ceramics 84 3.4 New Electron-Doped Iron-Selenium-Based Superconductors 86 3.4.1 First Discovery of Electron-Doped Iron-Selenium-Based Superconductors 87 3.4.2 First Discovery of Molecular Intercalation Series of Iron-Selenium-Based High-Temperature Superconductors 89 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 90 3.4.4 First Anderson Localization in the Single-Crystal Electron System 91 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 95 3.5.1 Metal-Organic Framework Isoporous Materials 95 3.5.2 2D Crystalline Materials 95 3.5.3 Chapter 4 Outlook 103 4.1 Strategic Needs 103 4.1 Strategic Needs 103 4.2 Conceptions and Suggestions 111	2 2		Crystals and Nonlinear Optical Crystals	58
3.3.3 Infrared Nonlinear Optical Crystal 3.3.4 Laser Crystals and Transparent Ceramics 3.4.1 First Discovery of Electron-Doped Iron-Selenium-Based Superconductors 3.4.2 First Discovery of Molecular Intercalation Series of Iron-Selenium-Based High-Temperature Superconductors 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 3.4.4 First Anderson Localization in the Single-Crystal Electron System 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 3.5 Other Novel Crystalline Materials 3.5.1 Metal-Organic Framework Isoporous Materials 3.5.2 2D Crystalline Materials 95 Chapter 4 Outlook 4.1 Strategic Needs 4.2 Conceptions and Suggestions References 11	515	3.3.1	Research on the Structure-Property Relationships of Nonlinear Optical Crystals New Deep-Ultraviolet Nonlinear Optical Crystals	74
3.4.1 First Discovery of Electron-Doped Iron-Selenium-Based Superconductors 3.4.2 First Discovery of Molecular Intercalation Series of Iron-Selenium-Based High-Temperature Superconductors 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 3.4.4 First Anderson Localization in the Single-Crystal Electron System 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 3.5 Other Novel Crystalline Materials 3.5.1 Metal-Organic Framework Isoporous Materials 3.5.2 2D Crystalline Materials Chapter 4 Outlook 4.1 Strategic Needs 4.2 Conceptions and Suggestions References 11		3.3.3	Infrared Nonlinear Optical Crystal	
3.4.1 First Discovery of Electron-Doped Iron-Selenium-Based Superconductors 3.4.2 First Discovery of Molecular Intercalation Series of Iron-Selenium-Based High-Temperature Superconductors 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 3.4.4 First Anderson Localization in the Single-Crystal Electron System 91 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 93 3.5 Other Novel Crystalline Materials 95 3.5.1 Metal-Organic Framework Isoporous Materials 95 3.5.2 2D Crystalline Materials 99 Chapter 4 Outlook 103 4.1 Strategic Needs 4.2 Conceptions and Suggestions 11		3.3.4	Laser Crystals and Transparent Ceramics	86
3.4.1 First Discovery of Electron-Doped Iron-Selenium-Based Superconductors 3.4.2 First Discovery of Molecular Intercalation Series of Iron-Selenium-Based High-Temperature Superconductors 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 3.4.4 First Anderson Localization in the Single-Crystal Electron System 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 3.5 Other Novel Crystalline Materials 3.5.1 Metal-Organic Framework Isoporous Materials 3.5.2 2D Crystalline Materials Chapter 4 Outlook Chapter 4 Outlook References 10 References	3.4	New I	Electron-Doped Iron-Selenium-Based Superconductors	00
Based High-Temperature Superconductors 3.4.3 True Composition and Structure of Superconducting Phases in the K-Fe-Se System 3.4.4 First Anderson Localization in the Single-Crystal Electron System 3.4.5 Regulation of Superconductivity in Thin-Layered Iron-Selenium (FeSe) Single-Crystals 3.5 Other Novel Crystalline Materials 3.5.1 Metal-Organic Framework Isoporous Materials 3.5.2 2D Crystalline Materials Chapter 4 Outlook 4.1 Strategic Needs 4.2 Conceptions and Suggestions References 11			First Discovery of Electron-Doped Iron-Selenium-Based
