

Contents

1 Thermal properties of high-k $\text{Hf}_{1-x}\text{Si}_x\text{O}_2$	1
1.1 Introduction	1
1.2 Interatomic potentials	1
1.3 Modeling and computing method	3
1.3.1 Building the model	3
1.3.2 Input files	4
1.3.3 Output files	4
1.4 Results and discussion	5
1.4.1 Lattice constants	5
1.4.2 Bond length and bond angle	6
1.4.3 Elastic modulus	7
1.4.4 Specific heat	8
1.4.5 Coefficient of thermal expansion	9
1.4.6 Phonon density of states and Debye temperature	10
1.5 Discussion in materialism dialectical thinking	12
Questions	12
References	12
2 Molecular dynamics for mechanical properties of BN sheets	14
2.1 Introduction	14
2.2 Modeling and computing method	15
2.2.1 Build the model	15
2.2.2 Input files	17
2.2.3 Output files	18
2.3 Computational details	18
2.4 Results and discussion of indentation	19
2.5 Results and discussion of shear	27
2.5.1 Effect of extreme strain rate on shear mechanical property of the $\beta\text{-Si}_3\text{N}_4$ thin layer	27
2.5.2 Effect of loading temperature on shear mechanical property of the $\beta\text{-Si}_3\text{N}_4$ thin layer	31
2.6 Discussion in materialism dialectical thinking	35

Questions	36
References	36
3 Monte Carlo simulation of solar cell materials	38
3.1 Introduction	38
3.2 Modeling and computing method	41
3.2.1 Cluster expansion Monte Carlo Simulations based on first-principles calculations	41
3.2.2 Determination of inhomogeneity degree σ of In-Al distributions in CIAS alloys	42
3.2.3 MAPS code input files	44
3.2.4 Output of MAPS	44
3.2.5 Input of Monte Carlo simulations	44
3.2.6 Output of Monte Carlo simulations	44
3.3 Results and discussion of CuInSe_2 - CuAlSe_2 pseudobinary alloys	45
3.3.1 Optimized structure of terminal phases	45
3.3.2 Formation energies and effective cluster interactions	46
3.3.3 Spatial distribution morphology of In-Al atoms in CIAS alloys	48
3.3.4 Inhomogeneity degree of CIAS alloys	50
3.4 Results and discussion of CuInSe_2 - CuInS_2 pseudobinary system	54
3.4.1 Effective cluster interactions and ground-state structures	54
3.4.2 Phase diagram	56
3.5 Reflection in materialism dialectical thinking	58
Questions	59
References	59
4 Can simple substances show non-zero valence?	60
4.1 Introduction	60
4.2 Modeling and computing method	62
4.2.1 Building the graphene model	62
4.2.2 Building carbon atom chain model	63
4.2.3 Mulliken charge calculation	63
4.2.4 Output files	64
4.3 Results and discussion for carbon	65
4.3.1 Zero-dimensional carbon	65
4.3.2 One-dimensional carbon	65
4.3.3 Two-dimensional carbon	67
4.3.4 Three-dimensional carbon	68
4.4 Charge distribution of other simple substances	69

4.5 Discussion in materialism dialectical thinking	74
Questions	74
References	74
5 Surface adsorption simulation of some energy materials	76
5.1 Introduction	76
5.2 Modeling and computing method	78
5.2.1 Build the Lithium-sulfur battery model	79
5.2.2 Build the surface model	79
5.2.3 Build the adsorption model	80
5.2.4 Input files	81
5.2.5 Output files	82
5.3 Computational details	83
5.3.1 Calculate the total energy of the total adsorption model system	83
5.3.2 Adsorption energy	83
5.3.3 Density of states calculation	83
5.3.4 Bader charge calculation	83
5.3.5 Differential charge	84
5.4 Results and discussion of P_2S_5 -adsorbed Li_2S surface	84
5.4.1 Properties of P_2S_5 and $Li_2S(110)$ bulk	84
5.4.2 Naked $Li_2S(100)$ surface	85
5.4.3 Properties of P_2S_5 -adsorbed $Li_2S(100)$ surface	86
5.4.4 Structure parameters of adsorbed P_2S_5	86
5.4.5 Adsorption energy of P_2S_5	87
5.4.6 DOS analysis of P_2S_5 adsorption	87
5.5 Results and discussion of PCBM-adsorbed $MAPbI_3$ surface	90
5.5.1 PCBM-adsorbed $MAPbI_3$ surface	90
5.5.2 Clean $MAPbI_3(100)$ surface	91
5.5.3 PCBM-adsorbed $MAPbI_3$ surface	92
5.5.4 Structure of PCBM-adsorbed surface	92
5.5.5 Adsorption energy of PCBM on $MAPbI_3$ surface	93
5.5.6 Electronic properties of PCBM-adsorbed $MAPbI_3$ surface model	94
5.5.7 Optical absorption properties of PCBM-adsorbed $MAPbI_3$ surface	96
5.6 Thinking discussion	97
