Chapter 1 Introduction	1
1.1 Basic concepts of reinforced concrete structure	1
1.2 Mechanism of combined action	2
1.3 Reinforced concrete members	3
1.4 Advantages of reinforced concrete	4
1.5 Disadvantages of reinforced concrete	4
1.6 Historical development of RC structures	5
1.7 Modern application of RC structures	9
1.8 Design method	13
Thinking and exercises	14
Chapter 2 Mechanical Properties of Materials	15
2.1 Steel bars	15
2.2 Concrete	24
2.3 Bond and anchorage	40
Thinking and exercises	44
Chapter 3 Basic Principles for the Design of RC Structures	46
3.1 Requirements for structural design	46
3.2 Action on the structure and structural resistance	48
3.3 Limit state of structure and approximate probability-based limit states design method	50
3.4 Design expression of the probabilistic limit state method	54
Thinking and exercises	59
Chapter 4 Flexural Capacity of Reinforced Concrete Beams	60
4.1 Introduction	60
4.2 Section size and reinforcement detailing	60
4.3 Bending test on an under-reinforced RC beam	62
4.4 Flexural capacity of single reinforced rectangular sections	67
4.5 Flexural capacity of double reinforced sections	77
4.6 T shaped section	82
Thinking and exercises	90

Chapter 5 Shear Strength of Flexural Members	92
5.1 Introduction	92
5.2 Shear behavior of RC beams	93
5.3 Strength calculation methods of members under shear	101
5.4 Detailing requirements for reinforcement	112
Thinking and exercises	118
Chapter 6 Axial and Eccentric Compressed Members	120
6.1 Introduction	120
6.2 Structural requirements of the compressed members	121
6.3 Axial compressed members	124
6.4 Eccentric compressed members	133
Thinking and exercises	152
Chapter 7 Reinforced Concrete Tension Members	154
7.1 Engineering applications and details of members	154
7.2 Axial tension reinforced concrete members	155
7.3 Eccentric tension members	157
Thinking and exercises	162
Chapter 8 Torsion	164
8.1 Introduction	164
8.2 Categories of torsion	165
8.3 Characteristic of failure under pure torsion	165
8.4 Cracking torque for members under pure torsion	168
8.5 Calculation of torsional capacities for members subjected to pure torsion	171
8.6 Torsional capacity of member under combined action of flexure, shear and torsion	176
Thinking and exercises	187
Chapter 9 Deflection and Crack	189
9.1 Crack width checking of flexural members	189
9.2 Deformation checking of the flexural members	196
Thinking and exercises	202
