

Contents

<i>Preface</i>	v
Part I Preliminary Exploration of Materials Science and Engineering	1
Chapter 1 Practice for Materials Science and Engineering	3
Experiment 1 Practice for Optical Metallography — Preparation and Observation of Metallographic Sample	3
Experiment 2 Practice for Material Processing — 3D Printing	8
Experiment 3 Practice for Energy Materials and Devices — Preparation of Proton Exchange Membrane Fuel Cell	12
Experiment 4 Practice for Electronic Materials and Devices — Preparation and Characterization of Organic Photodetector	15
Experiment 5 Practice for Biomaterials — Observation of Biological Samples	19
Experiment 5.1 Preparation and Observation of Biological Samples by Scanning Electron Microscope	19
Experiment 5.2 Observation of Biological Samples by Fluorescence Microscope	24
Part II Fundamentals of Chemistry and Crystallography	29
Chapter 2 Fundamentals of Physical Chemistry	31
Experiment 6 Determination of Combustion Heat	31
Experiment 7 Determination of Saturated Vapor Pressure of Pure Liquid	35
Experiment 8 Construction of Binary Gas-Liquid Phase Diagram	38

Experiment 9	Determination of Rate Constant for Hydrolysis Conversion of Sucrose	44
Experiment 10	Determination of Electromotive Force of Galvanic Cells	48
Experiment 11	Determination of Surface Tension of Ethanol-Water Solutions	53
Experiment 12	Determination of Relative Molecular Weight of Polymer by Viscosity Method	59
Experiment 13	Determination of Crosslink Density of Rubbers by Swelling Method	64
Chapter 3	Fundamentals of Organic Chemistry	71
Experiment 14	Isolation of Alcohol from Red Wine by Simple Distillation	71
Experiment 15	Purification of Naphthalene by Recrystallization	77
Experiment 16	Separation of Liquid Mixture by Liquid-Liquid Extraction	82
Experiment 17	Extraction of Oil from Sunflower Seeds by Solid-Liquid Extraction	87
Experiment 18	Separation of Pigments from Spinach Leaves by Thin Layer Chromatography and Column Chromatography	92
Chapter 4	Fundamentals of Crystallography	99
Experiment 19	Ball Models of Atomic Arrangements in Pure Metal Crystals	99
Experiment 20	Construction and Analysis of Crystal Structure Models	105
Part III	Material Properties	111
Chapter 5	Mechanical Properties of Materials	113
Experiment 21	Tensile Test of Materials	113
Experiment 21.1	Tensile Properties of Metals and Work Hardening	113
Experiment 21.2	Precise Measurement of Tensile Properties	118
Experiment 21.3	Influence of Molecular Structure and Strain Rate on the Tensile Properties of Polymers	121
Experiment 22	Hardness Test of Materials	124
Experiment 22.1	Heat Treatment and Hardness Test of Metals	124
Experiment 22.2	Shore Hardness Test of Polymers	129

Experiment 23	Charpy Impact Test of Polymers	132
Experiment 24	Compression Test of Materials	135
Experiment 25	Three-Point Bending Test of Materials	139
Experiment 26	Torsion Test of Metals	143
Chapter 6 Physical Properties of Materials		149
Experiment 27	Determination of Ionization Rate of Plasma in Direct Current Sputtering	149
Experiment 28	Coprecipitation Synthesis and Magnetic Properties of Magnetite Nanoparticles	154
Experiment 28.1	Synthesis of Magnetite Nanoparticles by Coprecipitation Method	155
Experiment 28.2	Characterization of Structure and Magnetic Properties of Magnetite Nanoparticles	157
Experiment 29	Nanoemulsion Synthesis and Optical Properties of Iron-Gold Nanocrystals	161
Experiment 30	Preparation of ZnO Thin Film by Sol-Gel Method and Determination of Energy Bandgap	166
Experiment 31	Preparation and Characterization of BaTiO ₃ Based Piezoelectric Ceramics	170
Part IV Material Preparation and Treatment		179
Chapter 7 Forming and Heat Treatment		181
Experiment 32	Microstructure Observation of Crystallization and Aluminum Alloy Ingots	181
Experiment 33	Preparation of Stainless Steel Pellets by Powder Metallurgy Method	184
Experiment 34	Construction of Sn-Bi and Sn-Zn Binary Phase Diagrams	187
Experiment 35	Microstructures and Diffusion of Iron-Carbon Alloys	193
Experiment 35.1	Observation of Equilibrium and Non-Equilibrium Microstructures of Iron-Carbon Alloys	194
Experiment 35.2	Surface Carburizing Heat Treatment of Low Carbon Steel	199
Experiment 36	Heat Treatment of Aluminum Alloy for Precipitation Hardening	203

Experiment 37	Forming Process of Polymers and Application in 3D Printing	206
Experiment 37.1	Determination of Melt Flow Index of Thermoplastics	206
Experiment 37.2	Extrusion and Injection Molding of Polymers	209
Experiment 37.3	3D Modeling, Printing, and Tensile Properties	213
Chapter 8	Organic and Polymeric Materials	219
Experiment 38	Preparation of Copolymer with LCST Phase Transition by Atom Transfer Radical Polymerization	219
Experiment 39	Synthesis of Aspirin by Esterification Reaction	222
Experiment 40	Synthesis of Polystyrene Microspheres by Dispersion Polymerization	228
Experiment 41	Synthesis of Organic Semiconductor and Determination of Frontier Orbital Energies	231
Experiment 41.1	Synthesis of Organic Semiconductor	232
Experiment 41.2	Determination of Frontier Orbital Energies by Cyclic Voltammetry	238
Chapter 9	Nanomaterials	243
Experiment 42	Synthesis of Metal Nanoparticles	243
Experiment 42.1	Citrate Synthesis of Gold Nanoparticles	243
Experiment 42.2	Synthesis of Silver Nanoparticles by Chemical Reduction Method	246
Experiment 42.3	Synthesis and Characterization of Au@Ag Core-Shell Composite Nanoparticles	249
Experiment 43	Synthesis of Cadmium Sulfide Nanoparticles by Microemulsion Method	252
Experiment 44	Preparation of Nickel Nanowires by Template Electrodeposition	255
Experiment 45	Synthesis and Characterization of Rod-like Silica Nanoparticles	258
Experiment 46	Preparation of Surface Conductive Glass by Spray Pyrolysis Method	260
Experiment 47	Preparation and Characterization of Porous Thin Films	263

Part V Material Applications	267
Chapter 10 Energy Materials	269
Experiment 48 Fabrication and Characterization of Lithium-Ion Batteries	269
Experiment 48.1 Synthesis and Characterization of Cathode Material LiCoO_2	269
Experiment 48.2 Fabrication and Performance Test of Lithium-Ion Batteries	273
Experiment 49 Fabrication and Characterization of Polymer Solar Cell	281
Chapter 11 Electronic Materials and Devices	287
Experiment 50 Magnetron Sputtering Deposition of ITO Thin Film and Hall Effect Test	287
Experiment 51 Fabrication and Characterization of In-Ga-Zn-O Thin Film Transistor	293
Experiment 52 Micro-nano Processing by Lithography	299
Experiment 52.1 Preparation of a Logo Pattern by Photolithography	299
Experiment 52.2 Fabrication of DVD Microstructure and a Simple Microfluidic Device by Soft Lithography	301
Experiment 52.3 Pattern Transfer by Nanoimprint Lithography	305
Experiment 53 Fabrication of Enzyme-Based Glucose Biosensor	308
Chapter 12 Biomaterials	313
Experiment 54 Preparation and Antibacterial Property of Silver-Loaded Activated Carbon Composites	313
Experiment 54.1 Preparation and Structure Characterization of Antibacterial Silver-loaded Activated Carbon Composites	313
Experiment 54.2 Antibacterial Test of Silver-Loaded Activated Carbon Composites	316
Experiment 55 Preparation and In Vitro Cytotoxicity of Pluronic F127-Encapsulated Curcumin Micelles	323
Experiment 55.1 Preparation and Characterization of Pluronic F127-Encapsulated Curcumin Micelles	323

Experiment 55.2	In Vitro Cytotoxicity of Pluronic F127-Encapsulated Curcumin Micelles	329
Experiment 56	Preparation and Bioactivity of Polylactic Acid/Nano-Hydroxyapatite Composite	335
Experiment 56.1	Preparation and Characterization of Polylactic Acid/Nano-Hydroxyapatite Composite	335
Experiment 56.2	Bioactivity Evaluation of Polylactic Acid/Nano-Hydroxyapatite Composite	338
Chapter 13	Materials and Environment	343
Experiment 57	Passivation and Corrosion Behavior of Ferrous Alloys	343
Experiment 58	Salt Spray Test of Metals	349
Experiment 59	Synthesis and Photocatalytic Activity of TiO_2 Powder	352
Appendices		359
A1	Experimental Safety	359
A2	Experimental Errors	361
A3	Data Presentation	363
A4	Experimental Report	365
